COUNTERFEIT GOLD.

GILDING POWDERS ARE MADE OF COPPES AND SPELTER

Bow the Material That Gives the Shining, Metallic Finish to Mirror and Picture Frames Is Produced. Gold Leaf Without Gold.

How many persons who see the shin-ing gold in colored printing and on mirror and picture frames know that gold does not enter at all into the composition of the stuff that produces these

golden effects? The shining metallic effect is produced by a fine powder made from a mixture of bronze and spelter. This offers the cheapest and best means of giving the rich surface demanded in wall papers, printing, lithography, frescoing and in a vast range of manufactured articles of wood, paper and iron.

The material used is so called Dutch metal, an alloy of copper and spelter. The relative proportions are varied to produce different colors. The larger the percentage of spelter the lighter or more yellowish will be the tint of the

The copper and spelter are smelted in graphite crucibles containing about 400 ounds of metal, which, when completely fused, is run off into molds, forming half round ingots two feet long by half an inch in thickness. After cooling these are bound into bundles and sent to the rolling mill, where they are passed cold nine times through a double set of steel rolls under enormous pressure. This flattens them and draws them out into thin ribbons from 50 to 60 feet long and something more than one inch wide. Cold rolling under such extreme pressure makes the metal brittle, so it passes to the annealing furnace, which is heated by wood fire, as the sulphur in coal or coke would be injurious to the ribbons.

Having been softened and rendered ductile by annealing, they are cleansed in an acid bath, cut into lengths of about three feet and collected in bundles of 40 or 50 strips each. They are laid between sheets of zinc and passed under hammers which beat the metal strips to the thinness of tissue paper. This requires six successive beatings, and great skill must be exercised to produce a uniform and unbroken foil. After the third beating the metal strips are taken from between the sheets of zinc, loosened from each other and cleansed by immersion in a bath of tartrate of potassium. The cleaning is repeated after the last beating, and the sheets are hung on lines to dry. In the beginning the rolled strips are a dull gray metallic color, at the fourth beating the yellowish color begins to show, and after the sixth they are clear and

bright as gold. The defective leaves are then thrown out and the perfect ones cut into small squares, which are laid together by hand in packets of several hundred each and inclosed within an envelope of sheet brass. The packets return to the annealing furnace, where they are softened by heating and slow cooling, and then go to the beaters, where they are reduced under flattening hammers to the thinness of real gold leaf, so thin that it can be blown away by the

breath. The manufacture of bronze powder consists in grading, clipping and pulverizing the various bronze foils to an even, impalpable powder and is an industry of comparatively recent date. It began as a means of using up and utilizing the imperfect leaves which came as waste from the beaters of gold, silver and bronze. These were cut by hand into fine clippings and then ground to powder in hand mills of simple construction. With the lapse of time and the spread of artistic industries the uses of bronze powder increased until the demand far outran the supply of waste, and the leaf metal

is now made on a large scale. The beating process flattens out pound of copper and spelter alloy to an area of about 500 square feet, and in this condition the square sheets as they come from the brass envelopes are sheared into small fragments and rubbed with olive oil through a steel sieve having ten meshes to the inch and then passed to the stamping and grinding machines, where they are pulverized by steam or water power to the bronze powder of commerce. The grinding occupies from one to four hours, according to the grade or quality of the powder to be produced, which is of four grades, from coarse to superfine. The superfluous oil is removed by heating under pressure, and the powder is then carried into centrifugal clarifiers, or grading machines, which, turning at a high speed, expel the powder through fine orifices in the form of dust, which settles on inclosed shelves, according to weight and fineness, the finer particles at the top, the coarses below, and in this way the powder is divided into its various grades.

How Customs Vary. She-In some parts of Australia when a man marries each of the bride's

relatives strikes him with a stick by way of welcome into the family. He-Yes, and in many parts of America when a man marries each of the bride's relatives strikes him with a loan by way of welcoming him into the

Traveling Experiences. Mother-Sir, I hope my little boy doesn't worry you by his fretting and crying. He isn't well, or he wouldn't Mr. Man—Oh, no. All children act that way. I'm used to it—in fact, I haven't seen a well child for 20 years.

A man should not be blamed for the mistakes he makes. He should be credited as he profits by them,-Atchison

EMPRESS FREDERICK'S WILL.

London, Sept. 11.-The late Dowager Empress Frederick's relations with Count Seckendorf, the Grand Marshal of her Court, has been the subject of international gossip long before her death. It had been frequently said that she was married to the Count. Truth to-day makes the following unqualified statement concerning will: "The fact has transpired that there is a legacy of three million marks to Count Seckendorf, with whom her Majesty is alleged to have contracted a morganatic marriage. AN ORDER AS TO STREET CAR FENDERS.

Toronto Sept. 11. - An order-i,ncouncil was passed by the government to-day on recommendation of the provincial engineer, Mr. MacCallum, providing that all street railway companies in the province must equip their cars with Providence, or Twentieth Century, or Stechman's improv-ed fenders. In one or two places good fenders are already in use, Ottawa, for example having the Providence, but in most of the cities the present fenders are life-traps, and must be reomved within three months. If the order is not complied with, a fine of \$10 a day may be imposed. The Toronto company will have to spend about \$10,000 at once on the new fen ders.

WILL FIGHT TO A FINISH.

Pittsburg, Pa., Sept. 11. - While stories of a peaceful settlement of the strike with the Amalgamated Association were heard with much force and persistency, President Shaffer continued to deny them emphatically, and said that the battle of the steel workers would go on until they won. He denied that the Executive Board had instructed him to settle the strike on any terms, and said that he would not go to New York to make any further peace move for the present.

UNIVERSAL PEACE CONFERENCE.

Glasgow, Sept. 11 .- The universal peace conference opened a four days' ession yesterday. Dr. Trueblood, an American delegate, said the peace sentiment in America was the strongest since 1815. The Federal Government was probably committed to the Hague peace conference. The friends of peace were now endeavoring to induce all the American republics to draft a mutual peace arbitration treaty pledging themselves to refer all disputes to The Hague. There was good prospects of securing the signatures of the states which were not now represented at The Hague.

## DON'T BECOME AN OBJECT

Of Aversion and Pity. Cure Your Catarrh. Purify Your Breath and Stop the Offensive Discharge.

Rev. Dr. Bochror, of Buffalo, says: "My wife and I were both troubled with distress-ing Catarrh, but we have enjoyed freedom from this aggravating malady since the day we first used Dr. Agnew's Catarrhal Powder. Its action was instantaneous, giving the most grateful relief within ten minutes after first application, 50 cents. Sold by J. W. McLaren, Chatham.

THE RETIRED BURGLAR. Te Tells Where and Where Not to

"It isn't up to me," said the retired burglar, "to tell where to hide your valuables so that you cannot have them stolen, but I can tell you where not to hide them and save you lots of trouble in giving them up. Here is a list of hiding places to avoid:

"Grandfather's clock. (Burglars hide in them often.)

"In the mattresses.
"Under the carpets. (Easily located in

"Under the carpets. (Easily located in sneak shoes.)
"In the rag bag or wastebasket.
"In an unused grate or up a chimney.
"In sofa pillows or furniture.
"In the ice chest.
"It certainly is not a compliment to the ability of a professional to secrete goods in any of those places and not expect him to find them without half an effort. The scooped out volume of Dickens or Thackeray is as easily located, and the diamonds or roll of money which takes the place of literature is a familiar find. The piano often yields a fair harvest, and the shoes worn the day before left standing at right angles in the middle of the bedroom floor. Once in my salad days I confiscated a pair of such shoes and, as they fit neatly, kept them for my own use. One shoe always pinched me, and one day I sat down and dug a \$50 bill out of the toe of that shoe. Why, it might have crippled me in time.

"And one night I slept in the guest chamber of a gentleman who was out of town with his family. I never slept so badly—in an elegant room, on a mattress filled with 40 pounds of white hair. I had horrible dreams, and in the morning there was a lump on my side as big as sen apple. Now, what do you think? I

had horrible dreams, and in the morning there was a lump on my side as big as an apple. Now, what do you think? I had lain all night on a diamond sunburst that had given me all those bad dreams and nearly broke a rib. Such methods of hiding valuables are barbarous."

The retired burglar looked thoughtful for a moment; then he said in a prophetic voice:

voice:
"I may be wrong, but the time is coming when there will be a burglars' union, which will insure safety for both the owner of valuables and the man who live by his wits and steals in the dark in dis-guise when his betters steal in the day-time unmasked. If a man can sleep with his doors and windows open without fear of burglarious intruders by paying a moderate assessment on his superfluous luxuries, I believe it would be for the good of the commonwealth. Some time I will draft a constitution and bylaws from my point of view. You see, I have had experience."—Chicago Record-Her-

"I wish you would leave me some money, George, dear," said Mrs. Speed-way. "I am quite out, and several little way. "I am quite out, and several little bills are coming in today." "Certainly, little woman," replied Mr.

Speedway. "I am sorry you found it necessary to ask me. I ought to have asked you if you needed money. How much would you like?" "About \$10."

"Why so unfeminine a sum, dear?" asked Mr. Speedway.
"Unfeminine?" she queried. "I do not understand."

"Yes, \$10 is unfeminine. You should have asked for \$9.87. However, here's the tenner, and you needn't give me back the change."—Pittsburg Commercial Ga-

An Up to Date Prac The doctor investigated the case thor

oughly. Then he looked out of the win-dow and reflected. "You are right," he said. "The trouble with you is dyspepsia; nothing else." "And yet I have been very careful of my diet," asserted the patient. "What you have eaten," announced the doctor, "has nothing to do with the case; t is what you have seen."

"But will you be able to fix me all right again, doctor?"
"Easily." was the reply. "I will have that dyspepsia tablet sign across the way removed at once, and I am confident you will have no further trouble."-Chicago

The Modern Hotel.

"Mr. Dash," said the waiter, "a man just lifted a silver spoon from the table."
"Call the police!" roared the clerk
"The man is a thief."
"But he is one of our regular guests."
"Ah, then he is doubtless a kleptomaniac. You needn't mention it, George. "And he pays \$5 per day on the "He does? Why, the gentleman is souvenir collector. How dare you cast reflections on his character?"—Chicago
