

- Gastrea-theory, 375.
 Gaudry, quoted, 347, 348.
 Gauss, 183, 305.
 Gautier, A. A., 305.
 Gay-Lussac's Law, 86, 89, 98.
 Geddes, Patrick, 354, 391; quoted, 334, 500; on history of biology, 330.
 Gegenbaur, 397, 335.
 Geikie, Sir Archibald, quoted, 228, 229, 233, 250, 261; Age of the Earth, 244; ancient volcanoes, 263; on denudation, 243.
 Geikie, James, quoted, 254, 264; Great Ice Age, 268; Earth Sculpture, 251.
 Geneology, defined, 365.
 Genetic continuity, 370, 397, 415.
 Geoffroy Saint-Hilaire, Etienne, 295, 336.
 Geography, 275.
 Geological record, its incompleteness, 349.
 Geological succession, idea of, 230.
 Geology, 225; dynamical, 225; experimental, 233; foundation stones of, 228; stratigraphical, 233.
 Gerhardt, 103.
 Germanium, 73, 112.
 Germ-cells, 369, 370, 416.
 Germinal continuity, 402.
 Germinal selection, 434.
 Germ-layers, 373.
 Germ-plasm, 399.
 Gibbs, Willard, 120.
 Giddings, quoted, 499.
 Gill, Sir Thomas, 193.
 Glaciation, 259.
 Glands, 291; ductless, 291, 298.
 Glazebrook, quoted, 167, 170.
 Glennie, J. Stuart, contributions, 502.
 Glycogen, 293.
 Glycogenic function of liver, 293.
 Goebel, 344.
 Goethe, 376, 427; as morphologist, 334.
 Goitre, 292.
 Goldschneider, 308.
 Goldstein, 163.
 Golgi, 305, 306.
 Goltz, 304, 310.
 Goodchild, Age of the Earth, 245.
 Goodsir, 312, 359, 362; on cells, 313; origin of cells, 357.
 Gould, 200.
 Graham, 93; on diffusion of gases, 147.
 Gravitation, 181; law of, 134; theory of law of, 135; formula, applications of the, 182.
 Grey matter of brain, 305.
 Groos, on play, 459.
 Grove, correlation of physical forces, 120.
 Gruber, 315.
 Gudden, Von, 307.
 Guerrini, 308.
 Guettard, 228.
 Guignard, 360.
 Guilick, 427, 439.
 Gulland, 298; tonsils, 299.
 Gumprowicz, "*Rassenkampf*," 520.
 H.
 Haacke, 414.
 Haeckel, 338, 350, 364, 402, 404, 414, 427; biogenetic law, 375, 376; Gastrea-theory, 375; CEcology, 239.
 Haldane, J. S., 324.
 Hall, Sir James, 232, 257, 275.
 Hall, Marshall, 445.
 Hall, Stanley, 471.
 Halliburton, 360.
 Hanstein, 338.
 Haugergues, 144.
 Hatty, 94, 273, 274.
 Heape, experiments, 394.
 Heat as a mode of motion, 141.
 Heer, 266.
 Hegel, 183.
 Heldenhain, 300.
 Heim, 208.
 Helium, 74.
 Heilriegel on bacteroids, 124.
 Helmholtz, 120, 129, 196, 222, 235, 300, 306; *Die Erhaltung der Kraft*, 141; on sun's heat, 208; velocity of nerve-messages, 455; on vortex rings, 167.
 Henderson, 191, 192.
 Henle, 356, 357.
 Henneberg, 391.
 Hennell, synthesis of ethylene (1826-8), 100.
 Henry, induction currents, 161.
 Hensen, 392.
 Herapath, 93, 143, 170.
 Herbst, 315; experimental embryology, 388.
 Heredity, 397; defined, 399.
 Hering, 404, 453; on metabolism, 318.
 Herschel, Sir John F. W., spectroscopy, 213; on the sun's heat, 206.
 Herschel, Sir William, his work, 188; on the sun, 204; on sun-spots, 205.
 Hertwig, O., 315, 359, 360, 372, 381; on cell-theory, 311; experimental embryology, 386; experiments on frog's eggs, 382.
 Hertwig, O. and R., experimental embryology, 387, 389; germ-layers, 374.
