Painleve Gov't Sustained by Overwhelming Vote

Portugal Deports 30 Members of the 'Red' Legion--Russian Stations Continuously Listening in for News of Amundsen--Soviet Embassy in London Under Police Protection.

PARIS GOVERNMENT GETS BIG VOTE

PARIS, May 29. The Painleve Government was sustained in the Chamber of Deputies today by one of the biggest votes ever cast for a French Ministry, 537 to 29. The vote was a three-day debate on the French war against Rifian tribesmen which Painleve explained and defended. It was not a war of vengeance but a defence of French territory against an invading foe, and he declared that the Government was not seeking a single inch of additional Moroccan territory. The vote is regarded more as a defeat for the Socialist party than for Painleve. Under the arrangements of the resolution under discussion in the House, a parliamentary board of control will leave at once for the scene of operations to take proceedings, with no power to interfere but for the purpose of making recommendations to the House in the event the campaign is not waged accordance with the principles outlined by Painleve and Briand.

LISTENING IN FOR AMUNDSEN

MOSCOW, May 29. Russia's wireless stations, which have kept constantly on the alert with their listening ear 'phones night and day striving without result to pick up some news of the explorer Amundsen who attempted to lead an Arctic flight of two planes to the North pole a week ago.

PORTUGUESE COMMUNISTS DEPORTED

LISBON, May 29. Thirty alleged members of the Red Guard, a Communist organization, charged with implication in the recent insurrectionary movements, were today placed aboard a cruiser for de-

portation to Portuguese Guinea in Africa.

SOVIET OFFICIALS THREATENED

LONDON, May 29. The Soviet Embassy here, after receiving letters threatening certain of its officials, has been granted an armed guard day and night from Scotland Yard.

BOXING BOUTS POSTPONED

NEW YORK, May 29. The Milk Fund bouts, including the championship encounter between Mike McTigue and Paul Bertinbach, for the light heavyweight crown, were postponed to-night because of a driving rain that prevailed all afternoon and evening.

ORDINARY COURTESY ASKED OF DRY NAVY

ATLANTIC CITY, May 29. Declaring that the reckless use of firearms by men of the Dry Navy, if not curbed may result in unfortunate casualties, United States Senator Walter E. Edge sent a telegram to Secretary of the Treasury Mellon today, requesting that ordinary courtesy be shown to boat captains by Government officers. Jacob Law, member of the Chamber of Commerce, also wrote that unless activities of the Federal-run chasing vessels were curbed, cruising yachtsmen would be deterred from coming here, the fishing industry injured and thousands of dollars' patronage lost to the city.

DECLARED DIVIDEND

HALIFAX, May 29. A dividend of 2 per cent was declared and the entire directorate re-elected at the annual meeting today of the North Atlantic Fisheries.

the neck of Mrs. S. J. Bevan, of this city, and enclosed tiny snapshots of her husband and baby girl, Harriet. To-day it is in Mrs. Bevan's possession again, but the clasp is gone and the photographs are stained and weather-worn. The baby girl is eight years old and the father who wore the locket joined the ranks of the heroes who fell at Vimy Ridge. Almost nine years from the day she last saw it, the locket arrived by registered mail, accompanied by a note from the Dominion Department of National Defence. The letter explained that the keepsake and the pictures had been forwarded from the Imperial Graves Commission to Ottawa, to be sent on to their owner. They had been found on the battlefield, it said. Clearly discernible on the back of the snapshots, themselves blurred almost beyond recognition, are the words "Baby Bevan," and Mr. Bevan's name and regimental number. He was with the 1st C.M.R's.

"I gave him the locket just as he was leaving," said Mrs. Bevan. "You see he had nothing of mine to take away with him, and he said he wanted something so much. It was the only thing I had so I just took it off my neck and gave it to him as he went away."

Philadelphia Wages Lead the World

In the matter of real wages, according to an investigation made by the British Ministry of Labor, as reported in the official Labor Gazette, Philadelphia leads all other cities. The Manufacturers' Association Bulletin (Trenton) quotes the British figures; notes that "real" wages in London are taken arbitrarily as the basis for comparison; and explains the import of the qualifying adjective as follows: "The selection of Philadelphia as the representative American city may be objected to by many on the ground that Philadelphia wages are lower than Chicago or New York wages. This may be true of money wages, but there is an offset in lower living costs; and it is "real wages" that the British figures attempt to measure.

A Pathetic Return of a Love Token

WINNIPEG, Man., May 29.—(By Canadian Press)—A little gold locket, pathetic by its broken condition, and still bearing vividly the scars of years of exposure on the battlefields of France, has come back to home at last. In September, 1916, it hung round

Niagara in the Limelight

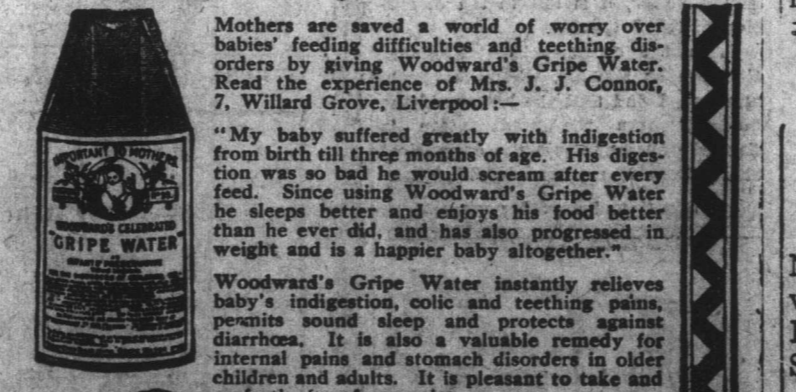

"Nature's greatest spectacle" is to be made still more spectacular by Art. Otherwise stated, Niagara is to be made optically glorious at night by searchlight illumination—twenty-four searchlights, having an aggregate of one billion three hundred and twenty million candle-power. The idea, it appears, is not new. As long ago as 1884, a primitive attempt to illuminate the Falls at night was made by Albert Bierstadt, by exploding a quantity of gun-powder on the rocky ledge beneath the American Falls, for the entertainment of a party of English railroad men. That was a small beginning. But in 1907 a large-scale temporary demonstration of illuminating possibilities was made by the director of the Illuminating Engineering Laboratory of the General Electric Company, W. D'A. Ryan, whose account of that experiment, together with a description of the new project of permanent illumination, appears in the current issue of Light (Cleveland). The present plan, indeed, Mr. Ryan tells us, is in effect the culmination of his earlier experiment. Mechanical progress, in particular the work on military searchlights, has made more powerful and efficient apparatus available, and the permanent Niagara installation will supply 30 per cent. more light than was used in the temporary demonstration of 1907. The flux of light will be adequate to light the Canadian and the American Falls simultaneously, even under adverse atmospheric conditions. Says Mr. Ryan: "Our 1907 tests showed that the best general results are obtained when Goat Island is lighted, and incandescent flooding lights of increased intensity will therefore be positioned there. Additional floodlights will be used to illuminate the rapids, above the falls. But the main barrage of light will be erected at the American and Canadian Falls themselves. "With the decreasing cost of light brought about by advances in the illuminating art, and with the increasing number of potential tourists created by the automobile and by general prosperity, conditions have fast been approaching the point where approx-

imate lighting of nature's most popular spectacle would be inevitable. And yet a tremendous volume of preliminary negotiations and arrangements was necessary before the work could be started, because two countries and two cities were involved. The cities of Niagara Falls, Ontario, and Niagara Falls, New York, together with the Victoria Park Commission and the Ontario Power Company, finally pledged their support. An expenditure of \$60,000 will be required for the installation and for its operation during the first year.

"Each searchlight contains a 125-ampere arc, an is thirty-six inches in diameter. The platform on which they are mounted is to be concealed by shrubs and overgreens so that the beauty of the surroundings will not be marred. All of the searchlights are located on the Canadian side, at a point near the transformer house of the Ontario Power Company, by which company the necessary electrical energy is to be contributed. Beams projected from this elevation will penetrate effectively the high, fine mists and reach the main bodies of falling water.

"It is planned to have the Falls illuminated four hours nightly. On special occasions or, if desired, as often as once a week, trained manipulators will execute light-and-color drills with the searchlights. Varicolored beams may be radiated in all directions, making a veritable Aurora Borealis. Or the beams may be concentrated on one Fall; distributed over both; or shot into the heavens to be visible seventy-five miles or more. "The Niagara Falls Chamber of Commerce is planning a rather extensive exposition, which will feature electrically for a period of ten days and nights. On the night of June 8 there will be an electrical parade with illuminated floats, which will terminate in the official dedication of the new lighting. On this night for the first time there will be colored drills and fireworks."

Baby Sleeps Well and Enjoys his Food now!

Mothers are saved a world of worry over babies' feeding difficulties and teething disorders by giving Woodward's Gripe Water. Read the experience of Mrs. J. J. Connor, 7, Willard Grove, Liverpool:—

"My baby suffered greatly with indigestion from birth till three months of age. His digestion was so bad he would scream after every feed. Since using Woodward's Gripe Water he sleeps better and enjoys his food better than he ever did, and has also progressed in weight and is a happier baby altogether."

Woodward's Gripe Water instantly relieves baby's indigestion, colic and teething pains, permits sound sleep and protects against diarrhoea. It is also a valuable remedy for internal pains and stomach disorders in older children and adults. It is pleasant to take and perfectly free from opiates.
