

BRITISH COAL IN PLENTY FOR CANADIAN BINS

Dominion Can Have Sufficient Fuel For All Needs If Ordered in Time.

SHIPPING CHOKES RIVERS

LONDON, July 24.—The ill wind of the American coal strike blows good for British miners and shippers. For months past the British mines have worked to only 50 per cent capacity. Orders have been secured and prices too low for living wages or minimum profits. The same applies to shipping.

The rivers are choked with boats laid up and the demand in the last few days from the United States and Canada for coal and freightage has been very welcome, though the British seem fearful that the orders are only a flash in the pan and will not be substantial enough to warrant the recommitment of tonnage laid up and restarting the mines now closed down.

Present Prices Low.

If demand is firm coal and freightage supplies this side are almost unlimited. Present prices are low. The best Welsh steam coal is \$5.50 per ton, and the cheaper grades of small coal are as low as \$2.86. These prices are below production costs, and the sellers will not quote for large future deliveries, as they expect prices to advance. For steamers being chartered for Montreal and American ports the tonnage rates are \$1.65 to \$1.95, though the charterers are holding back, because cheaper tonnage from the American shipping board is reported to be available. Official figures show over a million tons of British shipping laid up in port. British mines are capable of an annual coal output of 265 million tons. Actual rate owing to the poor demand is below 200 millions. Therefore, there is a large potential surplus available for export of every kind and grade of coal. Large American orders have been placed in the last few days for gas, locomotive and furnace coal.

Miners Won't Balk.

Efforts to persuade the British miners not to mine coal for export will be futile, for they remember that during the British strike the Americans grabbed the British markets.

Canada can have all the British coal she wants this winter if she orders it in time. The British are characteristically cautious about restarting the mines and recommitment of tonnage, but if persuaded that the demand is large enough they will deliver goods. The present low coal prices and freight rates will undoubtedly advance, but favorable terms can be got if the orders are substantial.

RAIL PARALYSIS IN U.S. LOOMS

and Northwestern anguished two between Chicago and Milwaukee. Six trains were delayed by the strike. Great Northern and Northern Pacific railroads at St. Paul.

In North Dakota, train service on several divisions was placed on a tri-weekly basis. Motor trucks would be used to carry mail on off days. It was announced.

Disorders took a new turn when seven men were arrested in Philadelphia charged with spreading among the workers at the Baldwin Locomotive shops literature demanding that the workers refuse to work on railroad equipment.

RENEW TRAIN SERVICE.

Buffalo, July 25.—The International Railway Company, whose cars have been on strike since July 1, today sent out its first inter-urban cars since the strike began. Two cars ran on the Niagara Falls high-speed line. City policemen guarded them as far as the city line, where they were taken over by state troopers.

A citizens' committee appointed by Mayor Schwab will begin this afternoon an investigation into the causes of the strike. The committee is assuming this mission to hold such an investigation, declared he wanted the public to know all the facts in the dispute between the street railway company and its striking employees.

Violence has practically ceased in the strike. In spite of the fact that the state troopers were withdrawn from the streets yesterday, following scores of complaints that they had mistreated citizens, there were only a few minor disorders.

BRIDGE COMPANY GIVEN AUTHORITY

OTTAWA, July 24.—(Canadian Press).—The Niagara River Bridge Company has been granted authority by the privy council to construct a bridge across the Niagara River just below the Falls, to replace the old cantilever bridge built in 1882, over which the Michigan Central Railroad now operates.

As the structure will be international, the authority is only so far as the jurisdiction of Canada extends.

Inventor Of Ukelele Dies Of Heart Disease

HONOLULU, T. H., July 25. Maui Nones, inventor of the ukelele, the musical instrument of Hawaii, died at his home here of heart disease, after a long illness. His death brought to light that, contrary to general belief, the ukelele was known to the Hawaiians only after the advent of the white man.

Nones was born in Funchal, Madeira, in 1843, and came to the islands in 1878. The following year he fashioned a rude guitar-like instrument with a cigar box and a few strings. It was from this that the ukelele of today was evolved.

tudes of adolescent girls who habitually eat too little. Women also eat too little, partly because the pleasures of the table make little appeal to them, and partly because of their instinct for frugality. A great deal of the nervous and other illnesses for which so many girls and young women engaged in business and professional life have to seek medical advice is due to their eating less than nature requires. How seldom does mere man make this mistake?

"EAT what you want" contradicts

Sir James Crichton-Brown, in speaking at a dinner given in London. "People go on very well before they ever heard of vitamins, guided solely by their common sense and appetite. There are enough vitamins in one lettuce leaf to do for a fortnight. Don't worry your head about them. Go on and eat what you want."

He also declared that tinned products generally are prepared with infinitely more care than the average cook gives to fresh food.

BUT don't get discouraged, women

folk! Be 100 per cent cannibal," advises Dr. Albert S. "Eat raw meat, drink the warm blood of the slaughtered animal and gnaw the bones of the marrow to attain the highest degree of physical perfection. Civilization has caused the average human being to become too pampered. We discard the most nutritive parts of a creature."

"Raw potatoes, raw carrots and sugar in its natural state should be eaten," he further advises. "And two glasses of water with each meal—not between meals."

According to Dr. Bloh, an eminent French surgeon, all the sympathy which is being expressed for the famine-stricken Russians—who are compelled to eat a mixture of grass and clay—is wasted.

"Earth-eating," he declared, "is not as harmful to health as the daily use of even a small quantity of alcohol. The whole question is one of adapting the human organs to the use of strange foods, which is merely a matter of time and conquering the first pangs of hunger."

Dr. J. M. Aldrich, of the National Museum, recently approved of the eating of worms, after sampling the kind eaten by the Mono Lake, California, Indians. Anus eaten in Africa. In Borneo they are mixed with rice. e La Laude, the celebrated French astronomer, urged the eating of caterpillars and spiders, and ate them himself.

trance of the market house. Ald. Cunningham said that it should be raised to \$7, but Ald. Drake asserted that \$10 was not too high for "two choice spots."

Another thing about the square that the aldermen could not understand was why the two fruit merchants on the corner of the Market Lane did not pay any rental for the space outside their stores for the baskets of fruit are piled for sale.

ARRIVES IN PORT AFTER ROUGH TRIP

Hoboken, N. J., July 25.—The Scandinavian-American liner Frederick VIII, from Copenhagen and Christiania, which narrowly escaped destruction in a storm 100 miles at sea Sunday night, arrived in port today. She carried 435 passengers.

At the heart of the storm, Captain Frederick Mecklenburg said, the seas washed over the boat decks, and many passengers became excited. Rain fell in torrents, and the vessel was carried far out of her course. At one time the bow of the ship narrowly missed a 60-foot whale, running out of the storm.
