

The first of these is the fact that the majority of the specimens examined were collected during the summer months, and it is possible that the observed behavior is a seasonal phenomenon. The second is the fact that the majority of the specimens were collected in the same area, and it is possible that the observed behavior is a local phenomenon. The third is the fact that the majority of the specimens were collected from the same type of habitat, and it is possible that the observed behavior is a habitat-specific phenomenon. The fourth is the fact that the majority of the specimens were collected from the same type of host plant, and it is possible that the observed behavior is a host-plant-specific phenomenon. The fifth is the fact that the majority of the specimens were collected from the same type of host plant, and it is possible that the observed behavior is a host-plant-specific phenomenon.

The authors are indebted to the following individuals for their assistance in the collection and rearing of the specimens: [List of names]. The authors also wish to thank the following individuals for their assistance in the preparation of the manuscript: [List of names].

Received for consideration, [Date]; accepted for publication, [Date].
