FORECAST NEW RULES IN CONTROL OF FUEL

Announcement of Federal Action in View of Possible Coal Shortage.

Ottawa, Oct. 6.—(By Canadian Press)—Regulations designed to control the fuel situation in view of a possible coal shortage during the winter months, are under consideration by the board of railway commission.

It is likely that they will be formally adopted and promulgated within the next day or two.

It is learned that the regulations will, to a great extent, follow the lines of those which proved effective during the shortages of recent winters. In one important particular, however, they will be different from the regulations previously in force. In view of the fact that conditions as to fuel supply for the next six months vary a great deal in the different provinces, the new regulations will be made optional. A province may adopt them or not, as the provincial authorities decide.
