

AIRCRAFT FOR FORESTRY SERVICE

Use of Aircraft in Forestry and Logging

Ellwood Wilson

Chief Forester, Laurentide Co., Ltd.

*An interesting account of effective
work done this year by seaplanes
in Central Quebec.*

The writer has been in charge of the Laurentide Company's aerial work for two seasons and gives herewith the results of the work. The first season showed absolutely the practicability of the planes for reconnaissance of unmapped or mapped areas, for transportation of passengers and of fire-fighting equipment, for looking over the work of

log drives, for spotting forest fires and for aerial photography.

The winter was spent in overhauling planes and engines and in the study of the pictures, taken from the air, on the ground. This spring a photographic laboratory was equipped so that photographs could be handled well and expeditiously.

Showing the practicability of the use of aircraft in forestry service, we reproduce the above from an article in the October, 1920, issue of this magazine.
