and 24 the butter as a junior four-year-old in R.O.P. in one year she made 1400 lbs. milk. Mr. Allison has a goodly number of this strain and expects much of them.

Atropeter, 26 head were tested, all making creditable records at the Allison Stock Farm last winter and this spring. The best of the herd are Sir Lyons Sigs and King Sigs. Pontiac Ag. Courts. There are 40 daughters of the first sire mated to the herd, and the first three tested ran over 20 lbs. as two-year-olds. The first 14 dams of the second sire average over 20 lbs. of butter, the first 20 dams over 22 lbs., the first 25 dams over 26 lbs. and the first 26 dams over 25 lbs., two with fifty struts at the end of high-class herd.

A NEW HERD RECORD

"It must certainly congratulate you on the success of your cow, and I am glad to know those who have just completed their test. I think this is the first time that a breeder has had three cows in the Record of Performance test in the same year, each of which exceeded 20,000 lbs. milk and that at our world show, one Canadian breeder has had more than two cows in the Record of Performance test in the same year. Certainly a breeder has had three cows qualify in one year with records to you."

In the above words did Mr. Drummond, of the Live Stock Branch, Ottawa, and Mr. J. H. McCallin, Sec. of the Holstein Frisian Association, express their appreciation of the above record.

other younger ones just as promising coming along. Mr. McElroy bids fair to establish the highest long distance record in Canada or the United States. The Junior Herd Sire at Mr. McElroy's farm is DeKol Mutual Count, a son of Champion Mutual De Kol. He has a record of 23,212 lbs. milk as a 2 1/2 year old, and established a world's record of 23,212 lbs. butter in 10 months at the Ontario Mutual De Kol in a daughter of Lawrence De Kol, who under test at the present time promises to establish a new world's long distance record. The crossing of these two long distance strains should throw up greater R.O.P. records at the Cheterville farm.

PRINCE EDWARD ISLAND
KINGS CO., P. E. I.
MONTAGUE, June 21.—We are having fine weather, little rain, and everything is growing as fast as it can. Seedling is about over, save for some turnips. Early for the army have again visited but shown but not taken. The prices are well loaded with bloom. The fruit trees Small fruits is also good. A lot more ground has been laid to grain on account of the war.—G. A.

ravages on the Blue Mountains, a short distance from here. It is to be hoped that it is checked before it does much harm. Pasture is getting better on account of the early frosts of the first of June and the last of May. The buckwheat crop looks very promising just now. Butter is 15c and eggs 15c.—G. P. MALIBURTON, P. O. CENT.

KINROSS, July 1.—The recent warm weather is doing the good it is doing for the last three years; old and poorly seeded meadows in some parts are poorer now. But it has caused great havoc, some fields of corn being utterly destroyed, also oats, fall wheat and barley. The heavy storms passed over here are killing a large number of stock. Several other heavy rains through here recently but no sales reported. Laying will be late owing to a cold June. Small fruits are a good crop.—E. O.

BRITISH COLUMBIA
NEW WESTMINSTER B.C.
CHILLIWACK, June 24.—The grain crops are doing well. The greater portion of them have already headed out. There has been excellent growing weather for all crops during the past few days. Buyers for the army have again visited Chilliwack. There were a lot of horses shown but not taken. The prices on the whole were decidedly weak.—J. O.

FEATURES OF THE OTTAWA EXHIBITION
THE Royal Canada Exhibition Association is announcing the main features of its 1915 Fair, Sept. 15 to 25, at the Dominion Government grant of \$5,000 has been set aside for the fair, making the total premiums amount to \$25,000. For the third year, the Association is paying the freight and the extra cost of exhibits from all points in Ontario and Quebec. An excellent show of field and garden produce will be featured in the new Agricultural and Horticultural Hall, finished last year. The prices on these things, as well as live stock, have increased. Altogether, the Ottawa Fair has now a total display of 100 pavilions of nearly 300,000 square feet. The manufacturers' exhibits promise to be very large, as well as the motive power are furnished free.

AYRSHIRE PROBLEMS
P. D. McArthur, North Georgetown, Que. THERE is an old saying that "every cloud has a silver lining" and if we look closely, we will find that these trying times are the best of times. In the near future there will be a realization of our most sanguine hopes. If we but endure the present time of depletion of the herds of the old lands, which have been almost wiped out, with foundation stock, buyers must look elsewhere for stock, and why not to Canada, which is today the only place second to none. But in order to get this trade we must be up and ready to produce high-class stock by breeding to the best and giving every chance for development to the offspring that they may develop into high rugged individuals of quality. Above all don't forget the heifers (so young) to advertise our stock. We hear a great deal these days about the "Made in Canada" campaign, carried on by our manufacturers, and we should be optimistic in our attitude about our "bred in Canada" Ayrshires. There are two ways by which we can advertise our stock. One is by the advertising capabilities of our herds through the Ayrshire exhibitions. In order that by making attractive showings at all our exhibitions. These must go hand in hand. Right here I would like to suggest that we ask exhibition boards to make classes in their prize lists for "Made in Canada" cows and heifers. This would overcome, in a large measure, the making of records at the expense of heavy and inferior formation, a characteristic in which the Ayrshire excels. In order that this may be accomplished we must each consider his or our own task, as only by so doing can we obtain the desired suits.

Few Prices Offered
An obstacle which confronts us and which has the tendency to discourage many breeders, is the fact that the few prices offered in each class. This brings up to us the question of the "made in Canada" for in order that we may be in a position to continue, let alone increase our support, we must be able to make a wise way and means by which we can overcome this obstacle.
Another matter that we should consider which would be a benefit to us financially, is that we should have a trouble experienced at present in the Record of Performance. It is necessary to strict the age limit at which animals can be recorded to one year, and doubling the fee over 100 lbs. but in case accepted an application for an animal

over three years of age. This would have the effect of bringing in all the registrations of the animals, and it is in the past year "Our Favorites" have been well bred, and the Record of Performance work is steadily gaining favor, especially as basis to determine the value of future breeding bulls. Let us continually strive for still greater improvement in our best pasturing that the end is not near.

MRS. DOLLAR'S PART.
Mrs. Dollar was an efficient helpmate in the building up of the Dollar herd. Counting her part in the business, E. M. Hastings, in the Holstein-Frisian World writes as follows: "It may not be generally known, but it is a fact that to the surviving widow, Mrs. Dollar, belongs a large credit for the success of the herd. Young and old, she scarcely presents the appearance of having saved the wages of a hired man during years of toil when the farm proposition was new and the herd was being established. But during these years, like many another farmer's wife, she worked early and late, out of doors and in the house, and unlike the ordinary farmer's wife, she milked not cows and made records. She did her best toward the upbuilding of a herd that was to become world famous, and it must be conceded that she was fully entitled to whatever share of the awards may have come to her when the herd

Canada's New Long-Distance Champion Producer, Little DeKol Lucknow.
Her semi-official record for one year, 23,212 lbs. milk, 841 lbs. fat, and 1,062.5 lbs. butter. In this she displaces May Echo as a butter maker, the old record being 23,077 lbs. milk and 1,062.6 lbs. of butter. This illustration does not do the full justice to the record, which was taken. She is owned by W. A. McElroy, Cheterville, Ont.

NOVA SCOTIA

CAPE BRETON CO., N.S.
SALMON RIVER, June 25.—Heavy rains assure a first class hay crop. All vegetable look well. Clover are being laid back by wet weather. Insect pests are not numerous so far. The market for eggs is considerably overrated. Prices range from 12c to 25c a doz. Butter is selling at 12c to 13c. Potatoes are good. Potatoes go for from 50c to 60c. Bees and veals are in good demand and prices are high. Local industries are in good times last year, on account of their orders to local industries.—J. H. McD.

NEW BRUNSWICK

VICTORIA, N. B.
TORBUQUE RIVER, June 28.—All seedling is finished. It has been long spring. Up to 10 days ago we had some very cold weather. The heavy rain during the past two weeks. We have had lots of rain and crops are looking fairly well. Hay is looking this time, when the photo is taken in many places, not so much here. Potatoes planted as last year; there are still a few old ones going to market at 35c.—D. I.

ONTARIO

GRENVILLE CO., ONT.
DOMVILLE, July 3.—Crops are none better, as we have had showers. Grain is good color. We are in need of a little more corn. Potatoes will be a little short. Farmers will be late in starting hay; raising, around the 15th or 16th. Cows are milking well; pasture is good. Feed is high; hay, 80c; shorts, 81c; corn, 85c; butter, 50c; eggs, 25c; potatoes, 35c to 40c; grain stuff is 5c.—G.W.C.
GREY CO., ONT.
THORNBERY, June 28.—We are having a heavy wet season at present time, but more rain is needed. The hay crop is going to be short, but alfalfa is good. The corn crop so far is good, though not as good as last year. Cows generally are good. The worm winter is starting its

preciation of the splendid new herd record that A. McElroy has established at his Cheterville farm. These records were completed during the past two months. They are all the more creditable in that Mr. McElroy is comparatively young in the Holstein business. His first cow, "Easy Bonegers" and her dam "Francy" were purchased in March, 1913. In the past year "Easy Bonegers" has produced 23,212 lbs. of milk containing 764 lbs. of fat. "Huckleberry" has produced 23,077 lbs. of milk containing 760 lbs. fat. "Little De Kol Lucknow," (19082) exceeded her two sisters in the past year, producing 23,212 lbs. of milk and 1,062.5 lbs. of fat. She thus established a new fat production record for the R.O.P.

Mr. McElroy advises us that these cows have made their records for this young breeder under ordinary conditions. In such a case it is evident that this young breeder is in his herd many animals with tremendous inherent powers of production. They are the large specimen type of dairy cows, and they are of a fine constitution for both heavy and persistent work. Their records are as proved by results. Their breeding is also conducted on a high standard. "Easy Bonegers" being out of "Francy Bonegers" and "Butterfly De Kol," who traces back to "Huckleberry" and "Francy" is a half sister to "Little De Kol Lucknow," whose photo appears in these columns. It is a good one of the type by any means being taken while she was in the line.

Two young sires worthy to head any herd in Canada are being offered for service. It is a good one of the type that about one year old and ready for service. The first of these is out of "Easy Bonegers" (23,000 lbs. milk) and the other is out of a 20,000 lb. half-sister to "Little De Kol Lucknow." Both of these young sires are by the Ontario Districter, Korndie, and bred by that most famous sire of this area, Pontiac Korndie. This puts them in the line of the two best bred young sires that are being offered to-day. With such dams as these, and with
