EXPORTERS-SCOTTISH FARMER.

1. Would you give me the names of some of the largest dealers in export cattle in Ontario?

2. Where is the "Scottish Farmer" published? W. B. S.

Ans.-1. See advertising columns of this journal, and answer to similar query

2. 93 Hope St., Glasgow, Scotland; A. MacNeilage, editor.

HENS DYING.

What is the cause of hens dying? They get weak and lame, but they eat till they die. Have been feeding them oats.

Ans.—These symptoms might indicate different diseases, as debility, rheumatism, leg weakness, indigestion, etc Would insure dry, light, clean, comfortable quarters. Give a mixed diet with some animal food throughout the winter. Most probably the lack of this has brought on the complaint. As a tonic and stimulant, you might try some one of the poultry foods advertised in this journal; this with a change of diet and spring weather will effect a cure.

MEADOW-WARBLES.

off, and what kind would be best to cut for hay this season?

2. Is there any way to keep warbles out of cows' backs that run on pasture in summer and wintered on straw? READER.

Ans.-1. Yes: sow red clover early on frozen ground, but it may not be ready for the first cutting. If you could get on a light coat of manure, or have wood ashes to spread on the field, it would make a wonderful improvement in the grass crop. This is probably what it needs more than anything else.

2. See article in March 24th issue, on warbles. There is no way to entirely prevent them.

PASTURE GRASS.

What grasses would be best adapted for pasture on a red, sandy soil? Would lucerne be good; and if so, what time would be best to sow the seed, and how long a time would it be before the cattle should be turned on; and how many years would it be good as pasture? S. McR.

Ans.-We should sow white clover, two pounds; alfalfa, four pounds; alsike, two pounds; red top, four pounds; blue grass, four pounds; red clover, four pounds, with a crop of barley or wheat, or upon a fall-wheat field. Keep the stock off the stubble, and cut for hay the first year; afterwards use for pasture. On such soils a light coat of manure each winter would be of immense value. Such seeding will be good for seven years' pasturing, if a good catch is secured

WATER IN CELLAR.

Water comes into celler in spring; is drained, but very shallow, inconvenient to drain deeper; outlet quite a distance. Could it be remedied by cementing? If so, how thick should it be?

1. Would it be advisable to put it down on one heavy coat, or on different coats, allowing first coat to dry before second coat is put on?

2. What proportion of cement and gravel should be used? Would coarse sand or fine gravel do, or is coarse gravel preferable

3. Would it be advisable to cement up the sides of walls some height? What is the difference between Portland cement and other cement? SUBCRIBER.

Ans.-It would be best to secure drainage; but concrete can be made to turn water. It will always be damp, however, when the water is high. Put the concrete down in two layers, the first six to one of rock cement, or ten to one of Portland; and the second, two to one of rock, or four to one of Portland. The first layer should be at least two inches thick, and the second about onehalf inch. Would extend the concrete up the sides first, then the floor would fit close to the walls. Portland is a special mixture of substances ground together in water and afterwards dried and pow-Rock cement is a natural cement found in rocks; is ground fine, and is then ready for market.

A crop that pays may not pay as well as it should.

'otash

is a plant food which all crops must have. Without sufficient Potash to feed upon no crop can reach that point where it pays best. Experiments have de-

FEATHER-PULLING

Kindly inform me what you think is the trouble with my Plymouth Rock hens, and how to cure them. Mostly all the hens are losing their feathers around their necks. O. W. F.

Ans.-This is probably due to the lack of meat food, or it may be that they are lousy. Attend to both conditions, and by the aid of spring weather they should improve.

CLOVER SEED PER ACRE.

What amount of seed of red, alsike and alfalfa clover should be sown to the acre? G. M.

Ans.—Ten to twelve of red, five or six of alsike, and fifteen to twenty of alfalfa, when each is to be grown separately If a mixed meadow is wanted, sow eight of red, four of alsike, and four or five of timothy. Always sow alfalfa alone.

DESTRUCTION OF SHADE TREES.

Can any individual or municipal council cut or destroy shade trees along highway? Trees were not planted, but grew wild along fences.

SUBSCRIBER. Ans.-Not without permission from the owner of the land adjacent to the highway and nearest to such shade trees, unless under by-law of the council, and when deemed necessary for any purpose of public improvement.

HENS DYING LAME MARE.

Some of my hens are unable to walk, and after a few days they die. What is the cause and treatment of this disease? 2. Mare, four years old, got a kick on the hip joint about six weeks ago. Got some liniment from the veterinary, and applied, but the mare is still lame.

What can I do for her? WM. D. Ans.-1. See that they are free from lice, and not too fat. Provide plenty of exercise by giving them scratching litter. It may be that they have roup, but the symptoms given are not full enough to decide.

2. Give her rest and more time to recover. Rub the liniment well in, and otherwise give her a chance.

CUTTING LOGS-GINSENG.

1. When logs are custom sawed at a mill, can the owner of the mill legally claim the slabs or sawdust. In buying logs is it legal for the buyer to measure the small end, or should he measure both ends, and strike an average?

2. Will ginseng thrive in an ordinary bush, and where can I obtain seeds or cuttings (whichever is preferable for starting) most conventiently? J. H. B.

Ans.-1. In such cases, the custom rate is generally fixed on the assumption that the mill owner gets the slabs and sawdust. If he did not the custom rate should be stated, as the former practice is so common that it is always understood. The log-measure is always laid on the small end.

2. Yes; on the ordinary Canadian loam soil. A. J. Martin, Kinmount, Ontario, advertised seed and cuttings for sale last fall.

KEEPING PICKLED BEEF.

Would you give me a good recipe for keeping a large quantity of pickled beef through the hot summer months? M. D.

Ans.-The following has been recommended: For fifty pounds of meat, take two gallons of water, four pounds of salt, two pounds of brown sugar, with one ounce of saltpetre. Let boil for ten minutes, skim well, remove from fire, and let stand until cold. Put the pieces of meat in a cask, cover with brine, weight the meat under, cover the top, and set in a cool, dark place. A piece of beef left in this pickle a few days makes the best of corned beef. If left in several weeks, soak over night before using. A handful of mace and cloves thrown into the brine will improve the flavor. If the brine becomes sour drain off, boil, skim well, and pour back upon the meat when cooled. In boiling salt beef, a good flavor is imparted by the following method: Mix tablespoonful of vinegar, same of Worcester sauce, and of stout or beer, add a tablespoonful of brown sugar, a teaspoonful dry mustard, a few cloves and allspice. Stir well, and add to the water in which the beef is boiling, just before it is done. Then let the meat remain in the pot until cool. Attention should be given that brine keeps sweet, and that the meat does not get too "soggy." In some cases, it is smoked and hung in a cool, lark place but this makes dried beef. R. REID & CO., Hintonburg, Ont.

ABORTION RETENTION OF PLACENTA And Failure to Breed

Kellogg's Condition Powder is a positive cure for these diseases. Prevents scours in calves and garlic in milk. Indorsed by the Iowa Agricul-tural College, Ames, Ia., and hundreds of the most promi-nent breeders. Write for booklet giving full information, price list and testimonials. Address H. W. Kellogg Company, Dept. Y, St. Paul, Minn.
