The Surplus Earned.

In 1912 the Canadian Life earned surplus of \$1,530,667, exceeding by over \$237,000 the earnings of 1911, and by a much larger amount the earnings of any previous year. This is of importance to policyholders, for their Dividends must come from this account.

CANADA LIFE ASSURANCE CO.

C. A. C. BRUCE, Manager,

B. V. D., as cut, \$2.80 suit.
BALBRIGGAN 2-piece Suits, Knee Length & Ankle Length Drawers, \$1.40 per suit.

Manufacture of Pulp Wood Now Rapidly Growing

Ottawa, July 9.—The home manufacture of wood pulp, in place of exporting it, is gradually developing in Canada, according to a report just issued by the Forestry Branch. Forty-eight pulp mills, reporting in 1912 consumed \$66,942 cords of raw material, valued at \$6,215,582. In the quantity consumed this is an increase of 28.8 per cent. over 1911. The increased value of the output is over 20 per cent., despite a decrease of 43 cents per cord in the average price of the raw material.

The pulpwood cut totalled 1,846,910 cords, valued at \$11,911,415 more than 50 per cent. of this, unmanufactured, was exported to the United States. It is estimated that if the material had been manufactured in Canada, the value would have been \$13,220,864. The amount actually received was \$6,695,833.

It Keeps Radium Safe.

Perhaps the most interesting safe in the world is one which has lately been built in London, for holding that priceless metal, radium.

Even the thickest and toughest of steel would be as useless for the storage of radium as a safe of plate glass would be for the storage of light. The valuable rays would easily pass out. Lead is the only metal impervious to the rays of radium, so the inside lining of the safe, which on the outside looks much like any other safe, is composed of a thick leaden box.

The valuable rays keep accumulating inside as the particles of radium throw them off, and in the ordinary way the opening of the safe door would allow them to escape. But by an ingenious arrangement the escaping emanations are caught by a couple of valves and pass into tubes filled with mercury, which keeps them safe.

This radium safe has been built to store a million pounds' worth of radium, though so large a quantity has never yet been got together. A million pounds' worth would take less room than a football.

Minard's Liniment Co., Limited.
Gentlemen,—Last August my horse was badly cut in eleven places by a barbed wire fence. Three of the cuts (small ones) healed soon, but the others became foul and rotten, and though I tried many kinds of medicine they had no beneficial result. At last a doctor advised me to use MINARD'S LINIMENT and in four weeks' time every sore was healed and the hair has grown over each one in fine condition. The Liniment is certainly wonderful in its working.

Millionaires Crowded Out.

OF LONDON HOTELS.

New York, July 9.—A cable from London says:—

The Daily Express states that if many more visitors crowd into London some one will have to start a "society for sheltering homeless millionaires."

For an hour or more after the boat train arrived from Fishguard early yesterday, quite a number of wealthy Americans scoured the West End in taxicabs in search of hotels with unbooked bedrooms. First-class hotels were full to the roof.

When the advance guard of trans-Atlantic travellers arrived at the Savoy they found the hotel clerk turning over a batch of wireless orders for rooms which it was impossible to satisfy.

Telephonic appeals to other hotels brought replies that there were no rooms to be had. This was at three o'clock in the morning, and the visitors growing desperate, chartered taxicabs and rushed off in search of beds.

Guns Fired on Ceramic

New York, July 9.—A cable from London says:—

The White Star liner new Australian steamship, Ceramic, arrived in the Mersey yesterday after a successful trip, on which two 4.7-inch quick-firing guns were tested at distances from 1,300 to 5,500 yards. This is the first time big guns have been discharged from a White Star passenger steamship.

2 p.m.—St. Mary's Sunday School Picnic, Mount Pearl.
6 p.m.—Excursion train to Bowring Park.
7 p.m.—Performances in Star and Nickel Theatres.

Ship's Engineer Battered to Death.

Battered beyond recognition, Bert Varney, sixth engineer on the C.P.R. liner 'Montreal,' was killed at sea on July 2nd last, the accident being reported when the ship berthed here. No one saw the man meet his death, but it is supposed that he was reaching across the big shaft of the ship, which makes eighty revolutions per minute, when he missed his footing or his hand slipped and he fell upon it. It hurled him into the shaft pit crushing his body in a most horrible manner. He was making his first voyage at sea in the 'Montreal' when he was killed.

The young man, who was about 21 years of age, and who resided in West Cowes, Isle of Wight, was attending to his duties as ordinarily in the engine room. Suddenly there was a shriek from Varney, and he was seen to shoot from the shaft into the pit beneath it. The crank hit him a terrific blow, probably killing him instantly, and before his body was so horribly mangled.

The engines were stopped, and the shattered body of the engineer gathered up, and the signs of the tragedy removed. The next day Capt. McNeill read the simple burial service, and Mr. Varney's remains were committed to the deep. Then the ship sailed on its way again.

Hero of Several Dangerous Feats

Hackensack, N.J., July 8.—Rodman Law, after being shot out of a cannon, dropped from balloons and air ships, dumped into the ocean on a speeding motor cycle and escaping unharmed from a score of other dangerous feats, came to grief yesterday in a three foot fall from a wagon. His shoulders were sprained badly, and a finger so lacerated that it will have to be amputated. Although not serious, yet his injuries are the worst he ever had.

Boys Seek to Emulate Dime Novel Characters

London, Ont., July 9.—Charles and Ernest Wright, aged fourteen and sixteen, after breaking into the home of Mr. J. E. Telford, a magistrate at Durham, and stealing a large quantity of valuable and cash, took to the woods and lived as outlaws. Finally tiring of the life, they gave themselves up and were each sent for three years to the Industrial School at Mimico.

It is stated that the lads had been reading dime novels and sought to emulate some of the characters.

The colour of their red coats is the obvious explanation why soldiers are often called "lobsters," but is not the true one.

In the process of manufacture the soldier's red coat changes colour under the influence of heat, just like a lobster when it is boiled.

When it has been dyed, "Tommy's" tunic is not, as might be supposed scarlet, but saffron, that is, deep yellow in colour.

What is technically called a "mordant" is then applied to it.

The next step is to subject the cloth to heat, under the influence of which the saffron colour changes to red.

It was men in the dyeing trade who, being acquainted with this process, first called Tommy Atkins a "lobster."
