

COGENT REASONS WHY

THE

CHATHAM

WAGGON

Adopted by the Government of the Dominion of Canada as the STANDARD WAGGON, should command your preference.:

THE intrinsic cost and value of it is at least \$10 more than any other waggon made in Canada, and any unprejudiced practical man will tell you so, and the thousands who now have them in use say so, because it is not only made from the best, carefully selected and thoroughly seasoned timber and best of iron, but the skells used; made only by us, are superior to any skells made or used in Canada, and are constructed specially to receive our CHATHAM TRUSS ROD, which doubles the strength of the axle, the boxing of the hubs are pressed, not wedged in; a guarantee for a year accompanies each waggon, and notwithstanding this additional cost and superiority, the CHATHAM WAGGON can be purchased at no greater price than is charged for inferior waggons. Bear in mind it is the running gear that carries the load, and no amount of fancy painting on the box will make an easy running and great carrier of a poorly constructed waggon.

Liberal Terms to Parties Buying in Carload Lots. Correspondence Solicited.

CHATHAM MANUFACTURING COMPANY (Limited)

FOUSTS' PATENT HAY LOADER.

The Foust, from its good working qualities, is pronounced by competent judges to be one of the greatest labor-saving machines of the day, and its superiority is proved by the fact that ten times more Fousts are annually sold than all other makes combined.

Received the HIGHEST and ONLY AWARD at the Centennial Exhibition.

Received the HIGHEST and ONLY AWARD at the Centennial Exhibition.

Manufactured by MATHEW WILSON & CO., Hamilton, manufacturers of HAY LOADERS and HAY TEDDERS.

This machine has been in successful use in the East for several years, and has lately been introduced with great success in Ontario. Each succeeding year has added new evidence of the practicability of the Loader, and shows conclusively the necessity for pitching hay on the wagon in the field by machinery.

All other work in hay-making has been done by machinery for a long time, leaving the pitching on the wagon the only part accomplished in the same manner and with no greater speed than during the earlier period of hay-making. With the use of the Loader as much time is saved in pitching as is saved by the Mower, Horse-Rake, Horse-Fork, or Hay-carrier, thereby making it safe for the farmer to cut at least double the amount of grass daily, knowing that he has the facilities for securing it.
