BLEICHERT TRAMWAYS

MUMFORD'S IMPROVED BOILER

Is internally fired and the hot gases pass through the tubes and return around the shell, making every foot of the boiler effective heating surface.

The water circulates rapidly from front to back of boiler, up the back connection to drum and down the front connection to a point below the fire.

Sediment in feed water will be deposited at front end of drum or below furnace and all parts of boiler are accessible for cleaning purposes.
