Stream	Tributary to	Description	Remedial Measures
10. Boise Creek	Upper Pitt River	Excellent sockeye stream with large amount of potential spawning area. Numerous log jams present of which some are impassable to salmon. Serious damage done by floods.	Remove log jams and improve spawning conditions.
11. Douglas Creek	Harrison Lake	Spawning beds scoured by logs and further damaged by floods. Formerly a very important spawning stream.	Remove log jams from channel.
12. Railway Creek	Upper Lillooet River	Beaver dam is located ½ mile above mouth. Good spawning area above dam. Sockeye now limited to lower part of stream.	Transplant beavers to non-salmon stream. Remove dam.
13. Mackenzie Creek	Upper Lillooet River	Beaver dam located 20 yards from mouth. Sockeye formerly spawned above dam but now confined to lower part of stream.	Transplant beavers to non-salmon stream and remove dam.
14. Pemberton Creek	One-mile Lake	Numerous log jams which not only block salmon but encourage shifting of channel during high water. Formerly supported run of sockeye.	Remove log jams and reestablish channel in former location.
15. Silver Creek	Fraser River	Place of difficult passage 1-5 miles below lake. Caused by log jams and rapids. Excellent spawning area above.	Remove log jams and improve channel.
16. Nahatlatch River	Fraser River	Large log jam at outlet of lake and numerous log jams on spawning areas that limit areas used by salmon. Extensive spawning area available and formerly produced large run of sockeye.	Remove log jams and general stream improvement.
17. Momich River	Adams Lake	Series of rapids ¾ mile from mouth. Sockeye spawn in lower part of creek.	Install fishpass in channel so that sockeye can ascend to upper regions.
18. Scotch Creek	Shuswap Lake	Large log jams near mouth of creek. Channel changes frequently during high water. Only remnant of former large run remains.	Remove log jams and establish channel.
19. Mann Creek	North Thompson River	Beaver dams near mouth which limits present spawning area. Log jams and dense brush in stream ½ mile from mouth. Present depleted run spawn at mouth.	Transplant beaver to non-salmon stream. Remove dam and log jams. Improve spawning area generally.
20. Finn Creek	North Thompson River	Large impassable log jams throughout entire spawning area. Channel frequently changes. Few salmon spawn in creek at present.	Remove log jams and establish channel. Make general stream improvements.
21. Gates Creek	Anderson Lake	Numerous log jams in creek form definite obstruction to migration of salmon. Formerly important spawning area but now runs only spawn near mouth.	Remove log jams and improve spawning area.
