

3. Who must shoulder most of the cost of solving the acid rain problem? (Canada/U.S.) Is Canada doing its part? Is it being fair in criticizing others?
4. To what extent do you believe this problem can be solved based on a strong relationship between Prime Minister Mulroney and President Reagan? Do you think each of them cares enough about this issue?

F. Investment in Space

1. Have you heard that the U.S. is looking for other countries to participate in the space program by investing in the development of a research station in space? What is your general impression of the need for this kind of program? What are the benefits? Do they outweigh the costs?
2. Should Canada get involved in the program? Why/why not? Will other countries get involved? Why/why not? Is there a danger of falling behind other countries in terms of technological development? How would our investment or lack of investment affect Canada-U.S. relations?

G. Conclusion

1. To what extent do you feel Canada/U.S. differences need to be solved by governments rather than by the companies and individuals involved?
2. If/Where governments need to deal with issues, how important is it that the two leaders are friendly/firm in their dealings? How much of each ingredient do you think should be applied now? How much of each do you feel is being applied right now?
3. Do you think American governments have tended to look at Canada more as an argumentative neighbour or as a good and steady friend who doesn't back down on its principles and won't surrender its rights? How should this be altered?
4. Can we afford to be less defensive in our dealings with the Americans? How might the President respond? Can he deliver real benefits to Canada?
