28	<i>clear and cold.</i>	10 2	0 52	0 22	1 52

during the winter in the usual manner; and the milk will be richer and of better quality. Cows should be treated with great gentleness and soothed by mild usage, especially when young and ticklish, or when the paps are tender. A Cow never gives down her milk pleasantly to a person she dreads or dislikes. Keep no more Cows than you can keep well; one Cow well fed will produce as much milk as two indifferently treated and if the Cow be wintered badly, she will rarely recover, during the succeeding Summer, so as to become profitable to the feeder. Cows should by all means be housed in extreme weather, and particularly those which give milk, or a failure in the quantity of milk will be experienced. Wherefore, instead of keeping 20 Cows poorly fed, and but half of them Stabled, sell 10 and give the remaining ten food in amount equal to what the 20 originally had; procure constant stabling for them, and you will receive quite as much milk and butter in return as was derived from the former mode of treating twenty.
