EPIDEMIC AT AN END.

Galt Had S1 Smallpox Cases, But Nearly All Are Convalescent, Galt, Feb. 11.-Notwithstanding some rumors to the contrary, the smallpox

epidemic in this town and neighborhood is at an end, and the disease otherwise is completely under control. There were in all 81 cases, affecting 21 families scattered thru the town, several of About three weeks ago the cases which were not convalescent were removed to the Isolation Hospital, which is on the hill west of the town and about six hundred yards from the General Hospital. Most of these cases, it is understood, were of a serious nature, being what is known as the confluent type. The local board of health has been The local board of health has been very active and energetic in dealing with the plague, and has been well supported by the citizens generally. Every house where there was a patient was closely quarantined, a guard being placed over it both night and day, and vent its spread. South Chicago, went on strike yesterday, following the action of the bollermakers, iron shipbuilders and shipcarpenters. Only the machinists remained, and, if they should go out to-day, the entire plant will close down. The unions are striking for a nine-hour day and advanced wages.

A Benutiful Portrait.

The beautiful portrait of Miss Florence Crawford is now on exhibition in Mr. Sherwood's studio. It has just been returned from the British Colonial Art Exhibtion, London, England, where it received high encomiums from the British press. The London Daily Telegraph contrasted the delicate coloring of the portrait with the strong and vigorous painting of "The Backwoodsman," another of Mr. Sherwood's paintings at that exhibition.

THE BOARD OF HEALTH IN SESSION.

vancement Made in the Science

of Sanitation. The Provincial Board of Health held its first session yesterday morning. The an iewing the sanitary work effected during the past year, was adopted and ordered crinted in the annual report. In the report it was stated that the year 1902 had no een marked by any epidemic of a for midable character. Sanitation was becoming a fixed science and its results were ore apparant and prompt than formerly. eaths during the year from communical iseases amounted to 25,208. These figures re based on a return from 90 per cent. of population of 1,982,000, and is an averag. of 12 per 1000. Mortality from tubercurosis 2164, diphtheria 444, typhoid fever 363, carlet lever 282, whooping cough 144,

There was a slight reduction from the ast two years in deaths from contagious diseases. In tuberculosis the reduction was 122, measies 14, diphtheria 68, Scarlet fever agaths had increased by 73, whooping tough 32. Preventive Measures.

Outbreak of Smallpex.

Outbreak of Smallpex.

At me morning session the principal topic of discussion was the present outbreak of smallpex of an unusually virulent type. It is not so general as last year, but the mortality is greater. It had been reported in 42 centres, and was worst at Galt, where there were 65 cases, and five deaths. The necessity of prompt vaccination was emphasized. Out of 30 cases noted at Galt, 17 had never been vaccinated as were vaccinated in infancy, four after exposure to contagion. None of those who had undergone the operation succumbed. There had been 2468 cases, costing the municipalities half a million dollars.

Deaths From Scarlatina.

smallpox."

In view of the serious aspect or the situation the board carried several protective measures. There is a provision for the instalment of temporary isolation hospitals to which cases must be removed, as now with diphtheria and smallpox. A medical officer on being informed of a known or asspected case must isolate it and quarantine all exposed persons, (ither in the home or other place of detention. No person who has not had scarlet fever will be permitted to leave their own premises until the period of incubation of the disease is passed and until the premises have been disinfected. If people are permitted to keep cases in their own houses the houses must be quarantined. The maximum period of incubation was placed at a week, and the minimum period of isolation at six weeks. When the disease occurs in a school a medical examination must be class-rooms or in the homes, till the period of incubation is passed. At present there is no fixed length of quarantine and incubation, and a doctor has the same autherity as a medical health officer.

YOU ARE WEAK Instead of Strong

Not exactly sick, but weary, worn out, and depressed-lacking in vigor and strength. Your blood is thin and watery, probably impure, and doesn't nourish the body. You require a tonic that will brace the nerves, stimulate appetite, improve digestion and circulation, aid assimilation of food, and bring sound, restful sleep. The best tonic is Ferrozone. It restores weak people to perfect health—drives away disease and gives to the sufferer a reserve of strength and energy.

IRONIZE THE BLOOD FERROZONE

Ferrozone is a splendid remedy for the blood and nerves. It purifies and enriches the blood, and fills it with power to nourish the enfeeble energies. The reconstructive and recuperative powers of Ferrozone arc unequalled, and with its regular use come vigor and strength to fight the battles of life. Don't live in a half dead state-try Ferrozone; the result will be a good appetite, healthy digestion, strong blood, restful sleep, and presto!-before long your wonted vigor of body and mind will return. Refuse a substitute for Ferrozone, which costs 50 cents per box, or six boxes for \$2.50, at druggists, or mailed to any address by
