# I Am A Happy Man

# Let Me Make You Happy

Early in December I found one of the largest English Mills hard-up for money. I bought 200 pieces of their very finest coatings for one-third the cloth value and kept my factories busy during December and made up 3,000 Overcoats for a January Surprise Selling Event, such as has never been seen before—and here they are,—at

**January Suit Special**

I also have ready for quick January selling — Suits in Stripes, Checks and Plain Colorings. New Patterns, new styles. \$35 values elsewhere.

FLYING FISH FLY OR JUMP?  
DEBATED QUESTION

Naturalists Differ in Opinions, But Some  
Think They Both Fly and Jump.

His explanation of how this comes about is ingenious. If Mr. Clayton is right, the fish jumps and flies, and both sides to the famous controversy are right, or partly so. He writes:

"In the early 'nineties I was engaged in the development of the meteorological kite of the Hargrave pattern, for lifting self-recording apparatus in the air, and later adopted by the various bureaux of the world for aerological research. This work brought me in contact with the early pioneer workers on the problem of flight, occasionally I co-operated in experiments on the lifting and driving powers of various devices.

"One of these was a device in which a stiff rod had attached to one end a flexible rod of bamboo, one end of the bamboo strip being tied near the end of the rigid rod and the other about one-fourth of the way down, so that the bamboo rod formed a loop, over which was drawn a covering of cloth.

**Air Pressure.**

"Now, if one took the free end of the rigid rod and waved the end containing the bamboo loop up and down, he was

immediately turned round by a forward motion of the outer end of the rigid rod. He lifted the rigid rod upward the flexible loop bent downward, and there was a vibration of the whole apparatus. For a while when he moved the rigid rod downward the flexible loop bent upward, and, again, there was a vibration of the whole apparatus. When vibrated the rod up and down, there was a persistent forward thrust, and this thrust was so great when the vibration was rapid that the operator was obliged to hold the apparatus in a fixed pivot.

In 1905 I was charged of the Tsesse-ent, Bort and Rutch Expedition for exploring the Antarctic with balloons and kites over the tropics. On the way to the Antarctic, which we traveled, was a small boat not much more than 100 feet in length. I saw a fish, which I thought that I had an excellent opportunity of studying the movements of flying-fish, which saw in

**Lifted By Tail.**

"As these fish left the water the powerful lateral strokes of the tail which lifted them into the air could be seen plainly. As they rose into the air the pectoral fins vibrated with great rapidity, and my earlier experiments with the rod and flexible web led me to believe that exactly this same principle was used by the flying-fish to drive itself forward.

"The forward part of the pectoral fin is rigid and the rear flexible, so that its rapid vibration gives a strong propelling force. When the fish had gained velocity and the rising impulse given by the tail had culminated, the fins ceased to

1921 A HEALTHFUL YEAR

**LAST CAR CLUB.**

The weekly meeting of the Last Car Club was held last evening at the home of Mr. and Mrs. J. W. Cadden. A number of the members were absent. A whist drive was held, and produced some keen and close competition. The narrow margin by which the winners were declared was of one point. The winners were Mrs. J. W. Cadden and Mrs. J. W. Cadden. First, L. Cadden. Consolation prizes were presented to Miss Lewis and Mrs. J. W. Cadden. The entertainment was served by the hostess when the card games were ended, and the evening was closed with instrumental music. The evening was contributed by and enjoyed by all present. The hostess, Mrs. J. W. Cadden, tendered to the host and hostess, and after singing Auld Lang Syne the members adjourned.

tion the greater number of lives at risk in 1921. Mr. Cox estimated that pneumonia was only about one-half as prevalent in 1921 as it was in 1920. That was last year. Tuberculosis, causing about 100 deaths in 1920, caused 10 deaths in 1921, showed a decrease of over 11 per cent, as compared with the year before. The most marked decline since a decade ago, when it caused nearly one death for every 100 accidents, was typhoid fever. On the other hand, showed an increase in 1921. It caused 10 deaths in 1920, increased 82.5 per cent, and those by

**USES FOR SEAWEED.**  
(New York Herald.)  
Among the important features of the agriculture of the north-western coast of France, in normal times, is the harvesting of seaweed. As soon as the seaweed is washed ashore, the gatherers lead diligently to work. Soon every rock and ledge is shaven of its covering of seaweed, and left as bare as the back of a shorn sheep.  
Then preparations are made for an attack on the reefs so numerous along the coast. The seaweed is cut up into small pieces. Everything that will float is pressed into service. Huge rafts are constructed, and the seaweed is hauled up to the shipping line in their favor, they are

Low water leaves them stranded on the reefs, and all hands make the best of their time. The worker kneels on the dripping weed, grasps a handful in the left hand, and, with a sickle in the right, cuts it off close to the rock and places it in a bag. As soon as he has cut off as much as he can carry, the sack is taken on the back to the raft, upon which it is received by men with pitchforks.

The morning ebb tide leaves the rafts and their spoils of seaweed high and dry on the smooth, white beach.

They are constantly surrounded by a crowd of people with all kinds of vehicles. All work together hauling the towed to the field already prepared to receive the precious fertilizer. That it may be most effective, the seaweed must be got into the ground as soon as possible rather than leave its native elements

**J. RITCHIE BELL, AT EXMOUTH STREET.**

A good audience assembled last night to enjoy the second of the series of evangelistic services in Exmouth street church, where J. Ritchie Bell of Montreal is assisting the pastor, Rev. J. C. Thomas. Mr. Bell based his remarks upon the eleventh chapter of the Gospel of John, strongly denouncing unbelief and selfishness of the church as illustrated in the reply of Martha, "By this time he stinketh, for he has been dead four days," when the Master commanded her to remove the obstructions which hindered the manifestations of God's power, promising that if she would believe she would see the glory of God.

The excellent choir of the church, augmented by additional singers from other churches, led in a spirited song service. The evangelist contributed a solo, "The Sweetest Song I Know."
