

The Rational Almanac.

Without disturbing the accepted Gregorian lengths of Years, now used, the advantages of the Proposed Permanent Almanac could be easily realised by the following 3 simple steps:-

1—From Christmas Day, 1916, cease naming Christmas Day by any week-day name, and merely call it "Christmas Day," which could be thus set apart as the extra yearly day, fitted into the last week of the year as a duplicate Sunday to permanently combine the week-end holiday with Christmas, and get rid of the troublesome and unbusinesslike changing of week-day names for dates in future years.

By naming "Leap Day" as a Public Holiday without any week-day name, justice would be done to salaried servants, whilst maintaining fixed day names for each date.

2—Let Easter, WhitSunday and the other movable Festivals be FIXED (as Christmas is) to always fall on the fixed Dates to be arranged for 1916, or such other Permanent Dates as will best suit the convenience, welfare and pleasure of the People—Easter our longest "open-air" public holiday, would be better for the Church and people if celebrated in the more ideal weather towards May.

3—Divide the 52 weeks of the Year into 13 months of 4 weeks each for greater utility and business facility, by inserting a Mid-Summer month (Sel) as shown to the right below.

PRESENT (1899) STYLE.							PROPOSED FUTURE STYLE						
Varying every year to 1916							Fixed from Christmas, 1916.
