Its issue in light and slender volumes is a novel feature of the new Encyclopaedia Britannica (11th edit.) published by the Cambridge University

A DRAWBACK SURMOUNTED.

Press.

The great drawback to the Encyclopaedia Britannica in the past has been its size. A volume weighed nearly 7 lbs. and measured 3 inches in thickness. Two hands were needed to take it from its shelf, and it could be read only at a table or desk. In too many instances, therefore, the Encyclopaedia Britannica was seldom opened, was regarded solely as a book of reference, to which recourse was had only n the last resort. Thus its size openly conflicted with the purpose which its editors, from the beginning, had kept consistently before them, namely, the preparation of a book intended, not only for reference, and for constant reference, but also for reading.

THE EMPLOYMENT OF INDIA PAPER.

oided in the production of a book containing wer 40 million words? There was, in truth, but one olution of the problem. It was recognized that the mployment of India paper would at once reduce the ad long been famous for its India paper Bibles; but e judged from the fact that the normal output of Inew Encyclopaedia Britannica. Experiments, however, publishers of the new Encyclopaedia Britannica believe opularity this purely material change is a considerthis information is presented. For the practical value an encyclopaedia depends upon the extent to which is used, and for once that the old cumbrous Encyclopaedia Britannica was opened and read, the new slender lumes will be used a hundred times

20 INCHES AGAINST 7 FEET.

illustration which accompanies this announce ent is reproduced from an actual photograph repreenting the new (11th) edition standing in front of the revious (10th) edition. To those who are acquainted the 29 slender volumes here shown in the foreground as been achieved without any diminution in the size Each of the old volumes, containing some pages, measured nearly 3 inches in thickness and upon 7 lbs. The new volumes contain -1,000 pages each, but in the India paper impression ach is slightly less than 1 inch in thickness and weighs out 3 lbs. The old volumes made a row over 7 feet vide and weighed 240 lbs. The new volumes occupy a width of 28 inches and weigh 80 lbs.

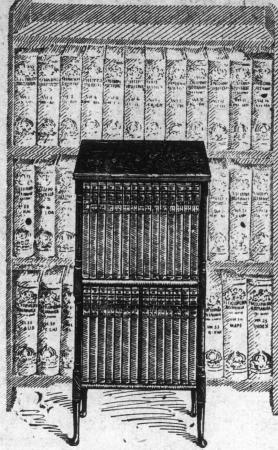

A BOOK TO BE READ WITH COMFORT.

edition from its shelf with thumb and forefinger n it was to lift one of the old volumes in two hands, whereas the reader of an old volume had to sit up table, the new India volume is light enough to hold ne hand, while the reader sits back at his ease. To reader, indeed, the thin India paper volume offers ther convenience besides that of its lightness, nameflexibility. The ordinary paper book, bound in ards with a stiff back, is ruined if it be doubled back, er to cover, and a quarto volume, however light, is onveniently large when held open. Indian paper, on e other hand, lends itself to flexible covers and an onveniently large when held open. India paper, on the new Encyclopaedia Britannica is thus able to nd it double, back to back, so that the quarto book nakes a handful no larger than an ordinary octavo volme or magazine when it is held open.

SPECIMEN PAGES PRINTED ON INDIA

Nor will the reader, upon nearer acquaintance, find ly reason to discount the evident conveniences of Inia paper. For the wonderful characteristic of this naterial is that with extreme thinness it combines an xtraordinary degree of opacity-thus the print does show through from one page to another. Moreer, India paper, made almost exclusively of rag, and finished with a hard surface, absorbs the ink less than ordinary book paper, and thus yields a very sharp imession from type and illustrations. On these points, the reader may judge for himself, since the specimen pages accompanying the prospectus for which he is invited to read are printed upon India paper,

The old and the new: contrast.

The 29 volumes of the new Encyclopaedia Britannica, 11th edit.,

(shown in the front of this photograph), contain over 2 million words more than did the 35 volumes of the 10th edition

(shown in the background) was the drawback of cumbrous volumes yet, printed upon INDIA PAPER, they ganize a Cibinet without the Nobles occupy one-third of the space.

> The Syndies of the Cambridge University Press attach great importance to this question of India paper. They believe, not only that the purchaser of the new Encyclopædia Britannica will, in virtue of this material change, better appreciate the value of his possession, but also that, in this compact shape, the book will aphave taken it at all in its old form. Nevertheless, in the production of a historic publication, they do not feel justified in breaking completely with tradition, and paper, such as was used for previous editions.

The low prices at which the new 11th Edition of the Encyclopaedia Britannica has been sold in the United Kingdom, Canada, India and the United States were offered originally with a specific purpose, namely, to ascertain in advance of publication, the proportion of subscribers who would choose the imression on thin India paper in preference to that on ordinary or thick paper, a matter of considerable importance to the publishers, in view of the small supply of India paper available. This proportion has now been fixed without any doubt. Of the 35,000 subscribers to the new Edition, over 85 per cent. have chosen the more attractive and handsome

It was, however, felt by the publishers that the advantage of the original low prices should not be withheld from other Dominions of the British Empire, still less from her senior Colony. The original low prices, therefore, are

still available in Newfoundland, but for short period only, at the close of which they will be advanced by at least \$10.00.

This advance has already taken place in the United Kingdom and is but the first step to the price at which this new Edition will ultimately be sold, namely, \$7.50 (30s.) a volume in its cheapest form, this being the price at which each volume of the 9th Edition was

The present price at which the new 11th Edition is sold is only \$4.00 a volume, in its cheapest form. The India paper impression costs only 25 cents a volume more, in spite of the additional expense of that paper, which has hitherto been the great obstacle to its more

Prospectus and specimen pages will be forwarded, post free, on receipt of this coupon.
