**I**N presenting our Catalogue of **GURNEYS' "HARRIS" HOT AIR FURNACES**, we would ask that you carefully note the many points in construction upon which we base our claims of excellence and superiority for the "HARRIS," all of which will be established and confirmed by an examination of the Furnace.

We introduced the "HARRIS" Furnace to the Canadian public in 1874, and it has successfully passed the severe tests of the twelve past winters; and while the quality of warm air supplied has been generally satisfactory, and one of the chief merits of the apparatus, its tremendous heating capacity has been demonstrated in a most gratifying manner; and its satisfactory operation, combined with ease of management, has established for it a reputation for excellence not yet attained by any similar apparatus.

We manufacture a very full line of both Wood and Coal Burners, adapted for heating any kind of building, and of which we give herein such illustrations, description and information as to capacity, etc., as will enable any one to comprehend its construction and operation, and intending purchasers to decide upon size necessary for their requirements.

We would also call attention to the extensive line of **Hot Air Registers and Ventilators** made by us, of which we give herewith sizes and prices; and we offer the goods with the assurance that in quality they are unsurpassed.

Respectfully,

The E. & C. Gurney Co.
