

The U. S. Agricultural department has issued a circular to all its correspondents in the southern states, asking for information relative to the use of paris green and other poisons in destroying caterpillars. It is stated that the total loss by the common caterpillar sometimes amounts to \$40,000,000 for \$50,000,000 in a year, and that the loss of a quarter of a million of bolls in a year when insects prevail would be deemed a light infliction. Paris green and flour, mixed, have proved very efficacious in destroying the potato bug. The same mixture has been used for the cotton insect, but with what result is not established.

"Girls," said a worthy old lady to her granddaughters, "when a fellow pops the question, don't blush and stare at your foot. Just throw your arms round his neck, look him full in the face, and commence talking about the furniture. Young fellows are mighty nervous sometimes. I lost several good chances by putting on airs before I caught your fond, dear grandfathers; but I learned how to do it after a while."

Why the Valve Jar is Superior to all Others for Preserving Fruit.

1. Because it is the only one in which the contents can be securely fastened, and cooked while thus fastened, without risk of an explosion.
2. It is the only one that is Automatically Sealed, therefore, the only Self-Sealing Jar in the market.
3. It is so simple that no skill is required to use it successfully.
4. It is securely fastened when placed in the kettle, and being immersed, the fragrance of the contents is confined in the Jar, a more perfect vacuum produced and the handling of the hot jars entirely avoided.
5. It is well known that fruit Jars which are closed with rigid fastenings burst by fermentation, and the effect upon the closet and surrounding well understood by many housekeepers.
6. The cover of the Valve Jar being a perfect safety valve makes an explosion impossible, and entirely obviates every difficulty that exists in other fastenings.
