

SCIENCE AND DEVELOPMENT

Food, nutrition, health, population, education, rural modernization, housing, and communications — these are some of the areas that concern the IDRC, a Canadian institution that supports results-oriented research in some 80 developing countries.

Disseminating the results of this research is an important part of the Centre's work. The Centre produces a wide variety of printed and audiovisual material ranging from scientific monographs, specialized bibliographies, and technical reports, to general-interest publications, films, and slide shows dealing with current development issues. It also publishes a quarterly nontechnical review, *The IDRC Reports*, and companion editions *Le CRDI Explore* and *El CIID Informa*.

For the scientist, or layman with an interest in international development, the Centre's Communications program offers a unique resource — an insight into the problems facing the people of the Third World, presented in terms of their own priorities, and an assessment of how research is helping to overcome some of these problems. Prices vary according to the type of publication but are kept as low as possible, because the Centre is a nonprofit organization. Special consideration is given to requests from developing countries.

For more information about the work of IDRC, or to obtain copies of the Centre's current catalogues of publications and films, please write to:
