

WORK ON THE JUMBO

The Long Crosscut Tunnel is in for 330 Feet.

DRIFTING IN ORE ON DEER PARK

The Ore is of Low Grade, But the Showing is the Best Yet Found in That Property - Progress of Work in the Vicinity of Eric - The Humming Bird Strike.

Mr. M. R. Galusha, manager of the Jumbo, is in the city from Spokane, and Thursday he visited the Jumbo. He reports that the long crosscut tunnel is in for a distance of 330 feet and will have to be run another 100 feet before the main ledge of the property will be encountered. Mr. Galusha says that there is plenty of ore that runs from \$12 to \$15 in the Jumbo and from the rapid manner in which freight and treatment charges are being lowered he feels satisfied that even now the Jumbo could be operated at considerable profit. He wishes, however, to block out large reserves of ore so that the stoping and the handling of the ore can be done at the minimum cost. A tramway for the cheap transportation of the ore from the mine to the railway will have to be constructed and then he will commence shipping. It will take several months more work to put the Jumbo in the position he desires it to be.

Deer Park Drifting in Ore.

The main crosscut on the 300-foot level of the Deer Park, at a distance of 90 feet from the shaft, cut through a body of solid ore seven feet and four inches wide. Though this ore is of low grade the showing is regarded as the best so far encountered in the property. In view of the expectation of finding higher values, a drift along the ore was begun yesterday. This drift will be continued for a considerable distance.

Lively Around Eric.

Mr. Jay Benn returned Thursday from a visit to the Eric section and reports that there is a great deal of life around that place. On the Canadian King there are about 18 men at work. They are sinking an incline shaft on the ledge, which now has a depth of 175 feet. The ledge in the bottom of the shaft is 20 inches in width, of solid ore that averages fully \$100 to the ton. This is as good a showing as the Arlington had at a depth of 400 feet. In fact, the Canadian King has the extension of the Arlington vein. On the Arlington a full force of men is at work. Work on the shaft continues and the workings are below the 500-foot level. Both the Arlington and the Canadian King have ore on the dump, but they only ship when the snow is on the ground. On the Second Relief four men are working on contract. They are drifting on the ledge and the showing is good. Mr. Robert Rainey has a force of men working on a group of claims near the summit. They have an excellent showing of ore that carries copper and gold. Work is to be resumed shortly on the Hexahedron group, which consists of four promising claims at the head of Burnt Creek. There is considerable work being done by individuals in that section and in most instances more than ordinary assessment work is being done.

B. G. M. & D. Co. Resume Work.

H. O. McClintock and George H. Green, secretary of the Baltimore Gold Mining & Development Company, have just returned from a trip of inspection to some of the mines controlled by them. The company has five claims on Lead Mountain, near the Silver King mine, viz: The Copper Queen and Humming Bird, which are crown granted, the War Eagle, Centre Star, Le Roi and a one-half interest in three other claims adjoining.

The Copper Queen, which was visited this week, is at present considered the most promising, and on it the most development work has been done. On this claim an open cut 18 feet long has been made, from which a crosscut of 20 feet runs to the straight tunnel, which is in 126 feet. At the end of the crosscut and beginning of the straight tunnel, lead No. 1 is encountered. This is two feet wide, and is a white quartz running high in copper values, assaying as high as \$75. At 75 feet in on the tunnel stringers of decomposed quartz were encountered, assaying \$10.40 in gold, but the assay for copper has been made. At 126 feet the main ledge was struck, and is from three to four feet in width of white and grey quartz mixed, sprinkled through with copper. On this lead a drift in a southeasterly direction is now being run, and has already reached a distance of 60 feet in ore all the way. The management is so greatly pleased with the success already obtained that it is its intention to prosecute the work vigorously, and a large force of men are now being employed.

I. X. L. in Good Shape.

In the course of development the owners of the I. X. L. have, it is estimated, taken enough ore out of their property to pay all expenses of development to date. The ore on the dump is free milling, and carries high values, considerable free gold being visible, and though the management of the I. X. L. is not disposed to give publicity to their operations, it is known that good deal of high grade ore is blocked out in the mine.

Cheap Ore Production.

A good instance of economical mining is afforded by present operations on the Evening Star, which property is now mining, shipping and smelting considerable quantities of ore at a total cost of \$7.75 a ton. This ore is being taken from a ledge near the surface, and its partially decomposed condition is an important factor in its cheap production. During two years ago it will be seen that the pay limit for Rossland ores has been greatly reduced.

MINING NOTES

Eight men were sent out to the Heather Hill Thursday to resume work. Mr. Alex. J. McMillan, superintendent of the Humming Bird property in Brown's camp, in the Boundary Creek country, is in the city on a visit to his

family. In No. 1 tunnel the ore body has been drifted on for a distance of 45 feet. There are 2,000 tons of ore in sight in this tunnel. A crosscut has been run for a distance of 105 feet. Mr. McMillan says he is satisfied that the Humming Bird has the making of a mine.

Additional news reached this city Thursday of the strike in the Morrison. The management consider that the strike makes the Morrison a mine. The ledge has been cut through for a distance of 25 feet and there is ore that will average \$20 to the ton. The work of drifting on the ore body has been commenced. Mr. Henry Reynolds returned Thursday from the north fork of the Salmon river, where he has been doing assessment work on a group of claims which he owns in that section.

Assays on ore from the Bluebird at Deer Park, a strike on which was reported in Thursday's issue, give returns of \$94 in silver, \$21 in copper, \$31.75 in lead and \$16 in silver, \$6.08 in copper and \$7.28 in lead.

A fissure vein of quartz carrying copper pyrites and gold has been struck on the St. Mary, which adjoins the John Bull group in the Burnt Basin district. A shaft is being sunk on the vein, which is four feet wide, and seems to carry better mineral as the shaft goes down. Specimens of the ore were assayed here yesterday and returned \$60 to the ton. M. J. O'Hearn and J. B. Singer are the owners.

LABOR DAY CELEBRATION.

Soliciting Committee Increased - Prizes For Decorations.

There was a meeting of the Labor Day committee Monday evening in the city hall, and considerable business was transacted. Mayor Goodeve presided and Mr. Taylor was at the secretary's desk.

The program committee presented a report of a program for two days' sports. The program is essentially the same as was printed a few days since in this paper.

The following names were added to the soliciting committee: Alderman Ross Thompson, Alderman J. S. Clute, Jr., Claude Cregan, J. Fred Ritchie and H. W. C. Jackson. An effort will be made to collect enough money for the celebration by Thursday night, when the final details of the program will be arranged and the time of the sports designated.

The committee wish to thoroughly understand that while the celebration is nominally under the auspices of the Trades and Labor Council, still no favoritism will be shown. In point of fact, it is a celebration on the part of all of the citizens of Rossland, and one in which everyone can and should take part. All citizens are requested to take an active interest in order to insure its success.

It was decided to engage two bands for the celebration on the first day and one band for the second day. It was decided to give two prizes for decorated buildings, and the committee desires to see as many buildings as possible decorated.

THE DAUPHIN COUNTRY.

Agent for Railway Contractor Secures Laborers in Rossland.

Mr. J. W. Austin, acting as agent for Daniel McGillivray, railway contractor, has sent 17 men to Rossland in the past few days. From the latter place they went to where the Dauphin road, on which Mr. McGillivray has a contract, is being built. This road will, when finished, open up a splendid agricultural section. Attention was first directed to the Dauphin section in 1897, and since that time there has been a constant stream of settlers going into the country. The country is adapted to wheat growing and grazing.

Reports the Business Good.

Mr. "Pat" Russell, general manager of the Parsons Prospecting and Development Company, left town Monday afternoon for Nelson, having covered the country with Mr. Fred Starkey, the Rossland manager. There is no more welcome visitor to any town or camp in the Kootenays than P. J. Russell, who is always stocked with the latest stories on the road as well as the most attractive quotations in his regular line of business. Mr. Russell reports business exceptionally good throughout the country, and always has a good word to say of Rossland.

Bank Changes.

Mr. L. Craig has succeeded Mr. J. R. Mackay as accountant for the local branch of the Merchants' Bank of Halifax. Mr. Craig has been the accountant at the Nelson branch for some time past. Mr. Francis McGinn, who came from Montreal, succeeded Mr. Craig at Nelson, as accountant there. Mr. Mackay will leave for Republic tomorrow, where he takes the place of accountant in the branch of the Merchants' Bank of Halifax which has been established at that point.

Deschamps' Was Evidently Rude.

In Monday's police court Richard Hoar, president of the Teamsters' union, and Sidney Deschamps, manager of Blue's sawmill, with assault, the case evidently arose out of trouble between the teamsters employed at the mill and the owners. The evidence went to show that Deschamps seized the complainant and forced him to mount his horse, at the same time addressing obnoxious remarks upon his materiality. To him Magistrate Jordan withheld his decision in the case, which will be resumed today.

TRACKS TO BE JOINED.

C. P. R. and the Great Northern Show a Friendly Disposition.

That the C. P. R. and the Great Northern intend to work in harmony is evidenced by the projected joining of the tracks of the two systems in this city. For convenience in reciprocal traffic, it has been decided between the officials that the roads shall be connected, and the necessary track will be laid by the C. P. R. within a week or two.

LADY LOVES BEAUTY.

Dr. Agnew's Ointment Stops Skin Blemishes - Leaves It Lily-White and Healthy.

Skin diseases of every nature, from the merest pimple on the flesh to the most distressing eczema, salt rheum and tetter, are quickly, pleasantly and permanently cured by Dr. Agnew's Ointment. In diseases where outward applications make a cure Dr. Agnew's Ointment never fails. One application gives instant relief. Sold by Goodeve Bros.

MINES AND MINING

The Windermere Country is Rapidly Coming to the Front.

MORE MINERS WANTED THERE

The Red Line is a Property of Considerable Merit - The Iron Colt Company is to be Reorganized - Late News From the Similkameen Section.

Mr. L. O. Garnett is in the city from Windermere, where he has been for some time past. There is a great deal of stir as there are good properties and considerable high grade ore there. Prospectors keep coming into the settlements in that vicinity with specimens of high grade silver-lead and gold-copper ore. There is a great deal of work in progress, and there is a scarcity of miners, and there is work for a number of additional miners there at the standard wages. Besides this there is work for blacksmiths, carpenters and others. As a matter of fact, the country is developing rapidly, and the supply of labor has not kept up with the demand. Confidence is growing that the ore carries values with depth. This is shown by the Sittling Bull property, which has been proven to a depth of 200 feet. The vein is of good width and of high grade. There are over 100 tons on the dump that goes \$80 to the ton. Among the recent visitors of them on the M. Gunn of the American Smelting company of Helena, who made a comprehensive and critical examination of the mining properties around Windermere. This gentleman stated that he never saw a country with a formation that so pleased him. Mr. Chamberlain of the Hall Mines smelter, has paid out \$2,000 for assessment work on the properties owned by his company in that vicinity. He intends to commence operations on a large scale before the farthest early next year. Fraser & Chalmers, the machinery men, are putting in a winter camp, and expect to work 30 men all winter on the Silver Thread property. They will withdraw out their ore. The Mackintosh syndicate have also been made on the Tulameen river and its branches.

These are some of the work going on in the district, several outfits being at work on the Similkameen and Granite Creek. The gold is all coarse and, therefore, easily recovered. Chinamen are working on Kelly creek and other streams in the neighborhood, and the other day I saw them packing sections of a fume from Granite creek to Kelly, so they are evidently making pay. There should be money in place mining in the Similkameen if properly carried on.

CLIFF MINING COMPANY.

It Holds Its First Meeting and Elects Its Officers.

The first meeting of the Cliff Gold & Copper Mining company was held in this city Saturday in the office of McNeill & Deacon. The first business transacted was the election of officers, which resulted as follows: President, A. S. Goodeve, who presided; H. M. Macleod, secretary-treasurer; C. A. Teasdale, Secretary; and J. E. Young, J. E. Young, and John Jackson, Jr., of this city, constitute the board of directors.

The company has already been incorporated with a capital stock of 1,000,000 shares of \$1 each. The object for which the company is incorporated is to operate the Cliff mine. This property, from 1893 to 1897, shipped several hundred tons of ore. The ore averages about \$28 to the ton, and that was when copper was worth 11 cents per pound. With copper worth 18 1/2 cents it will bring the average higher, as the ore carries about 10 per cent of that metal.

As soon as the necessary arrangements can be made, machinery will be installed and operations commenced.

Important Announcement Promised.

A telegram received yesterday conveyed the intelligence that Sir Charles Tupper, who is now in England, will soon leave for Canada, and will be in Rossland about September 24th. Some important announcements regarding the "Silver" will be looked for as a result of the Baronet's visit to London.

Low Smelting Rates.

Mr. James Brady, M. E., formerly of the firm of Moynard & Brady, is in the city on a visit from Victoria, where he spent the winter. Mr. Brady says he is much pleased with the way in which Rossland is growing. The fact that the camp last week shipped 5,000 tons of ore, he said, was an indication that showed the low rapidly the camp is growing. The fact that the smelter rate was so low as \$15 per ton, and this did not include the transportation by team and rail from the mine to the smelter. Ore had been given to understand, that ore that went only \$8 to the ton yielded a profit.

Iron Colt to be Reconstructed.

There is every prospect that work will be resumed upon the property of the Iron Colt Mining company. An extraordinary meeting will be held in this city on Monday, August 23rd, for the purpose of amending the constitution of the company. The object of the reconstruction is to modify the constitution of the company, and in particular, to enable it to make its shares assessable to a limited extent. The directors are satisfied that the proposed modifications would be advantageous to the company and to the shareholders, but counsel has advised that modification can only be made by reconstruction at the meeting, the following resolution will be offered for adoption: 1. That it is desirable to reconstruct the company, and accordingly, that the company be wound up voluntarily, and that Thomas Anderson of the city of Rossland, in the province of British Columbia, be and he is hereby appointed liquidator for the purpose of such winding up.

2. That the said liquidator be and he is hereby authorized to consent to the registration of a new company to be named the "Iron Colt Mines, Limited," with a memorandum and articles of association which have already been prepared with the privacy and approval of the directors of this company.

3. That the draft agreement submitted to this meeting and expressed to be made between this company and its liquidator, at the office of Abbott and Hart-McHarg, Rossland, B. C.

Dated this 16th day of August, 1909. ABBOTT & HART-McHARG, Solicitors to the Administrator.

ed, pursuant to section 13 of the companies winding up act, 1898, one of the statutes of the province of British Columbia, to enter into an agreement with such new company (when incorporated) in the terms of said draft and to carry out the same into effect with such (if any) modifications as they think expedient.

Late News From Similkameen Country is given by boom to bring them into the district. "The lateness of the season," says Mr. Oliver, "has greatly handicapped prospectors, the snow remaining on the summits a month later than usual. The prospecting season, however, is now at its height, and there are many parties scattered throughout the district. On Copper mountain and Kennedy mountain, which are in one mineral belt, the showings are of bornite, the country formation being a bastard diorite, intersected by porphyry dykes. The surface ore is pockety, and the veins are not readily traceable, but with depth there is no doubt definite veins will be found, while the ore is likely to turn into copper pyrites and carry higher values in gold than surface assays show. I noted an anxiety to attain depth on these showings on the part of the owners which should soon result in disclosing something of the character of the veins. Any kind of assays are to be obtained on the surface, and I think good values will be had through out in these veins.

"The Nicola section must be considered as part of the Similkameen district, and there the veins are also copper-bearing, that metal being found in many forms, but principally in bornite and native copper. Many of these veins are discovered years ago, but it required the Similkameen section to bring them into notice. This mineral area lies within a radius of 20 miles around Nicola, in the gold ranching country. Near the south end of the belt is the Big Sioux group, with its wonderful showing of copper glance ore. This seems, at present, to be the most promising part of the district.

"At Twenty-Mile camp, 20 miles south of Princeton, considerable work is being done on recent discoveries of veins of arsenical pyrites carrying high values in gold. Assays of \$300 and upwards are obtained. These veins occur in slate, and give promise of considerable value.

"Important discoveries of copper ore have also been made on the Tulameen river and its branches.

"These are some of the work going on in the district, several outfits being at work on the Similkameen and Granite Creek. The gold is all coarse and, therefore, easily recovered. Chinamen are working on Kelly creek and other streams in the neighborhood, and the other day I saw them packing sections of a fume from Granite creek to Kelly, so they are evidently making pay. There should be money in place mining in the Similkameen if properly carried on.

As soon as the necessary arrangements can be made, machinery will be installed and operations commenced.
