Built for Service

—to stand the wear and tear that men who work with brawn and sinew give their clothes—that's what distinguishes Atlantic Underwear.

Carefully made of stout, heavy, Maritime wool, Atlantic Underwear has a body, durability and comfort that is hard to match.

Sold in five different weights and qualities. Our lower-priced lines are not equal to the more expensive ones, but each is guaranteed to be the best value of its class. Compare them with others of like price and see for yourself.

This Trademark label on every garment is your sure sign of safety. Look for it!

Fawcett

Imperial Double High Oven Range

Is a marvel of Beauty, Economy and Efficiency. It saves Time, Labor, Linings, Fuel and Worry. You can't beat it.

The Fire Box Does It—Have a look at the Fawcett Hot Blast Kind.

As for Cooking and Baking, the Fawcett Imperial trims them all. Send for illustrated circular giving detailed description of the Imperial.

Ask your dealer to show you the Fawcett Line or write direct

CHARLES FAWCETT LIMITED

SACKVILLE - N. B. - CANADA

THIS IS THE IDEA—READ IT.

If you are desirous of really saving both time and money, just take time to investigate what we mean, when we tell you that we can weld any metal, any part of machinery regardless of size. We don't weld by hammer, we melt or fuse the edge of the fracture by the Oxy-Acetylene process, and have many years experience. You are not experimenting. Don't forget. Aluminum, Brass, Bronze, Cast Iron, Steel, Wrought Iron. Send it to us, we will advise you regarding cost, etc.

ST. JOHN WELDING WORKS

R. J. Foresti, Supt. WELDING ENGINEERS.
39 Nelson St., St. John, N. B.

McClary's Kootenay

TOP, bottom and all four sides of the Kootenay oven are evenly heated. That is why it is so famous as a dependable baker. There is a thermometer, too, to tell whether the heat is right or not.

No range is quite so easily managed. Duplex grates clear the ashes at a single turn. Burnished cooking-top never needs blacking. Nickled steel oven walls are kept clean with a damp cloth. Well-fitted joints and dampers hold the fire—and the oven heat—for hours.

Let us show you the Kootenay.

R. CHESTNUT & SON, LTD.

McClary's

Why all of a wagon wears out

Farm vehicles invite quick deterioration. They are out in every kind of weather. They get all kinds of rough usage. Every jolt tends to spread the joints.

The exterior of some kinds of property suffers all the exposures. But an open wagon is exposed inside and out. With a double surface exposed, there is double danger of decay. For decay begins at the surface.

Surface protection is a matter of a surface coating. The War demonstrated the supreme importance of proper surface protection. All Allied transportation equipment—from locomotive to ammunition truck—was painted repeatedly for surface protection.

The surface is the great danger point with wagons and everything else, whether the material be wood, iron, steel, concrete, cement or stucco.

Remember the need of surface protection. Remember that neither rust, corrosion, decay, nor wear and tear can get a foothold if kept from the surface.

Save the surface and you save all.

THIS ANNOUNCEMENT is issued by the Canadian Save the Surface Campaign Committee, for the purpose of educating the public in the preservation and protection of paint, varnish and allied products for the conservation of property, and for the approval of the Canadian Trade Commission in the following words:

"The realization of the above objects will lead to employment during the Reconstruction Period and bears our entire approval."

THE CANADIAN TRADE COMMISSION

"SAVE THE SURFACE AND YOU SAVE ALL" Paint & Varnish
MANUFACTURED BY THE CANADIAN TRADE COMMISSION

Paint this Fall

Because:
—of proper weather conditions.
—surfaces are now in their most receptive condition, practically every trace of moisture having been eliminated by the summer sun.
—the wood being dry it absorbs more readily, and the paint holds better.
—a surface needing protection should never be allowed to go over the winter without it.
—property needs more protection during winter than at any other time.
—Save the surface and you save all.

Shingle roofs are too often neglected. Soaking rain water seeps unprotected shingles, heating and warping and cracking them. They form cups to catch and hold liquid water. They develop surface moss which is highly inflammable. No surface is more exposed. Shingles need a protective coating. Well painted shingles last indefinitely and constitute one of the best types of roofing material.
