PSON BUILDING EARS COMPLETION

ill Be Ready for Mail Order Business on August Fifteenth.

MODERN STRUCTURE

Mutual Street House One of the Best of Its Kind on Continent.

An unsightly vacant, lot occupied space on Mutual street, north of Wilton, on April 19. Today, sixty days later, after practically unintermittent labor on one of the most gigantic structural undertakings ever promoted in the Dominion by 450 workmen under the direction of architects and contractors, the construction of the new building, which will be used for mail order business by the Robert Simpson Company, Limited, is more than half completed.

Eight days' work has been lost thru rain, the only delay which has interrupted the systematic raising of the building, which by Saturday will have its roof completed and which on Aug. 15, unless some unexpected einergency arises, will see the company in full possession of its additional quarters.

Architecturally, structurally and ornamentally the building in the opinion of-experienced contractors is one of the best of its kind in America. No detail has been lacking to make it one of the most modern, absolutely fireproof structures on this hemisphere. The structure is 280 feet by 115 feet in dimensions, eleven storeys high with two mezzanine floors and a small basement. It is made entirely of reinforced concrete with flat-slab con-

inforced concrete with flat-slab con-struction and stands on solid rock workmen having excavated to a depth of 45 feet, into which 75 caissons were placed for the foundation.

In addition to the natural attractiveness of the white concrete and its architectural arrangement, the building is ornamented with considerable ts of concrete and brick span-

Two hundred feet on two sides of the building, one of them the front, and 90 feet on another, will be of solid and 40 feet on another, will be of solid glass along each floor, concrete column supports having been set back for the purpose. The natural light which will be responsible for the name of "Simpson's Daylight Store" will be supplemented with electric lights thruout the building.

The area of the building provides for a total of 416,000 square feet, 32,000 square feet on each floor. The building is 160 feet high. One million pressed bricks have been used and 30,000 barrels of cement.

30,000 'barrels of cement. About Aug. 1 tests will be made,

and these will include the placing of 400 tons weight on four panels of each floor to prove their strength. Experiments of a similar nature were made of the hard grade steel which has been of the hard grade steel which has been placed in the structure. The steel has neen figured at 16,000 pounds to the square inch. The tests already made proved that 100,000 pounds weight can be held.

The Simpson Company is already moving into the new quarters, and within the near future a gang of men will be moving move goods steedly.

will be moving more goods steadily into the place. About 1000 employes will be on the pay roll and thousands upon thousands of dollars' worth of goods will be handled by them in the Mutual street building.

contractors are Isaacs & Sons, the cut stone work; the Canada Portland Cement Company, the cement; Imperial Glass Company, the glazing; the Roberts Company, the painting; the Canadian Ornamental Iron Company, the ornamental work; the Burlington Steel Company of Hamilton, the steel reinforcing work; the Rogers Company, sand and gravel; the Purdy-Mansell Company, the heating and plumbing; Bennett & Wright, the wiring and lighting; Henry Pope Company, the metal sash.

With the exception of the Burlington Steel Company and the architects, the N. Max Dunning Company of Chicago, all the sub-contractors are Toronto firms. Morris Grimbly is superintendent for the Robert Simpson Company, J. Purvis is the resident manager and John Anderson the general foreman who are supervising the construction. A. T. Burnett is head of the Simpson mail order department.

WON SCHOLARSHIP FOR GENERAL PROFICIENCY

Prize Donated by Sir John Eaton Won by Miss Jean Hoskin, Cold Springs.

Miss Jean Hoskin of Cold Springs was the winner of the Sir John Eaton Scholarship for general proficiency at the Wellesley Hospital graduation of nurses. The scholarship for proficiency in operating-room technique, given by Dr. Bruce, was won by Miss Gladys Bateman. Sir William Muleck's Scholarship for general proficiency in intermediate year was won by Miss Laura E. Moore of Markdale. Sir Edmund Osler's Scholarship for preficiency in junior year was won by Miss Isobel McLeod of Southampton. The graduates were: Jean Hoskin, Cold Springs; Louise McFall, Bolton; Eva Lind, Toronto; Ethel P. Winn, New Hamburg; Edith Williams, Toronto: Eleanor G. Henry, Brantford; Clara Young, Cochrane; Annie Griffin, Wingham; Gladys Bateman, Toronto: Gladys U. Gustin, Woodstock; Helen McD. Carrathers, Toronto; Alice L. Belt. Oshawa.

WOMEN MAKE SHELLS HUSBANDS USE THEM Range Week alone.

Town in Northern England Entirely Manned and Staffed by Women.

A town in the north of England has a munition factory entirely manned and staffed by women, most of whom are wives and other relatives of naval officers, and the shells they make are used by their own men folk.

The idea of the factory is said to have originated with the chairman of the munitions committee, who found that other necessary industries were being depleted by the girls going in such large numbers to the making of munitions. Moreover, he kncw that there were many of the well-to-do class who were anxious to do work of a patriotic nature.

The women employed come in their motors, remove their everyday filmsy attire, assume overalls and a small tight cap and get to work at their muchines. They are known by numbers

HYDRO IS SATISFIED WITH GOVERNMENT

Difficult Matters Cleared Up at Conference Yesterday.

DOUBTS ARE REMOVED

Allowed to Take Up Preliminary Work in Radial Construction.

T. J. Hannigan, Guelph, secretary of the Hydro Radials Association, and of the Association of Hydro Radial Municipalities, had a conference with Premier Hearst yesterday. The air seems to be clearing between the associations and the government. During the last session of the legislature there were several deputations from these associations which waited on the cabinet regarding the legislation put thruby the government on hydro matters. They went away none too well satisfied.

After the conference vesterday Mr.

They went away none too well satisfied.

After the conference yesterday Mr. Hannigan expressed himself as very well satisfied with the attitude of the government. While the cabinet might not always have satisfied the delegations which waited upon it, the officials of the associations found that the government had always been ready to give them a sympathetic hearing when they met to discuss matters, he said. There had been misunderstandings. He was about to report the results of his afternoon's conference with the premier to J. W. Lyon, Guelph, president of the association, and he expected that a declaration would be published by the association officers shortly.

One point which Mr. Hannigan discussed with Mr. Hearst was with regard to the bill put thru at the last session restricting construction of hydro radials during the period of the war. Mr. Hearst had assured him, said Mr. Hannigan, that there would be no obstruction placed in their way if they wished to make surveys and do other such preliminary work. The whole matter had been left to the discretion of the lieutenant-governor-incouncil.

RAILROAD OFFICIALS PUT BAN ON HAZARD

engineer that the stunt might wreck the engine and result in loss of life. Miss Gibson persuaded her director and the engineer to "take a chance." When the bar was thrown from the engine to the runaway box car the tender jumped the track, tearing up rails, while Miss Gibson barely escaped being caught between the cars. Nothing daunted, Helen was soon hurrying up the director in his preparations to try the scene once more. But at this juncture the railroad officials, having received reports from the train crew, issued orders prohibiting the repetition of the scene.

Later, to complete the story of this Kalem picture, the bar was done away with, and Helen made a clear jump from the engine to the ladder of the box car. Both trains were traveling at a high rate of speed and the thrill is most effective, tho it is Helen who takes all the risk and the railroad's equipment is not in the slightest danger.
