

409075

With the figures you will see on the drawn diagram. I went to another Indian one Alex M^c Donald and he figured it out to contain $7\frac{1}{4}$ Acres. another man Silas Gray figure it out to contain $7\frac{1}{2}$ Acres.

I wish to be informed which is right. The also made the measurement in the form of a square whereas the agreement was from the pine tree directly south. I told them but they would not listen to me. I know well enough they cannot compell me to sell my land if I do not choose to. But what can I do, they have measure it off and will claim it all!

The last thing I can think of is to have a surveyor from the Department settle it for us. Because it will be a case of main force winning.

I would be thankful for any information that would lead to a peaceful settlement for I am determined he shall not have any more land than was proposed in first agreement.

Yours Respectfully
Loran Pike
Clerk.
