

Women should Insist

No matter what you buy in kitchen utensils, demand that each article carry the **SMP** trade-mark shown below. **SMP** Enameled Ware is safe to use; acids or alkalis will not affect it; it cannot absorb odors; cleans like china; wears for years. Tell the storekeeper you want either

SMP *Diamond* or *Pearl* WARE

Diamond Ware is a three-coated enameled steel, sky blue and white outside with a snowy white lining. Pearl Ware is enameled steel with two coats of pearl grey enamel inside and out.

For Sale

Fodder Corn and Turnips. J. A. Duncan.

Harvesting Root Crops.

Roots crop should be taken up before the weather becomes too wet and disagreeable in the fall if in any quantity. It is slow work at any time, and becomes much more so under cold damp conditions. Lift the roots with a digging fork and twist off the tops, putting them in piles and covering with the tops. If a large area is to be lifted, and one is expert with a sharp hoe, he can very quickly remove the tops, but they will not keep quite as well. The roots should be ploughed out, throwing them as much as possible on the top. Bins with slatted sides and bottom should be used for storage where possible, as this gives the roots a chance to sweat. If the storage room temperature is above 40 deg. F., cover them with sand. Carrots should not be deeper than two feet in a bin, others may be four feet. Where cellar storage is not available use pits. These should be three feet wide, two or three feet high and of any length. Run the pits north and south where possible and have them on well-drained ground. Put a layer of straw on the ground and cover first with straw six inches deep, then six inches of earth, and as the frost gets harder cover with fresh straw manure. Have ventilators every 15 or 20 feet, as all roots sweat in storage. These may be filled with straw during cold periods.

All roots should be as free from dirt as possible when put in storage. It is often advisable to leave a few days in small piles so that at the second lifting any adhering will be moved.—A. H. MacLennan, O. A. College, Guelph.

Freemartin Heifers.

Twin calves—both of the same sex—will breed with just as much certainty as though they were born singly. When twins are born male and female the female is known as a freemartin and is usually sterile. There have been cases where freemartins have conceived, but they are rare. Probably not over one out of 100 will breed. It is just as unusual for the bull of male and female twins not to breed.

A Good Whitewash.

Slake one-half bushel of fresh lime with boiling water, covering the receptacle to keep in the steam. Strain the liquid through a fine sieve, and add seven pounds of fine salt, previously dissolved in warm water; three pounds of ground rice, boiled to a thin paste and stirred in; one pound of white glue, soaked first in cold water until swollen, then carefully melted over fire.

To this mixture add five gallons of hot water and let it stand covered for a few days before using.

Every farm and country home should feed itself, and to do this it is necessary for each family to grow garden vegetables and small fruits.

All corn cribs and grain bins should be carefully inspected to see that they are rat and mouse proof. A concrete foundation for storage buildings is advisable whenever it is practicable.

EAEGR'S

The Store of Quality

New goods arriving every week in Dry Goods, Men's Furnishings, Boots and Shoes, etc. All high grade goods and we are giving the best value for your money that is possible to give. We invite your inspectiot.
