LEMIEUX GROWS CAUSTIC

OTTAWA, June 13.—"I notice that the Rev. Mr. Jones, leader of the strikers in Winnipeg is a parson," remarked Hon. Rodolphe Lemieux, during the budget debate yesterday. "What kind of parson?" "I don't know, but I want to put this to the President of the Council (Rowell): I would like to put it to a Massey Hall audience; I would like to put it to the orange lodges, what would have been his fate if he had been Rev. Father Drummond, a Jesuit priest, Mr. Speaker, if this leader of the Soviet in Winnipeg had been a Jesuit he would have been shot before this."

SUMMER CARE OF VEGETABLES EXPERIMENTAL FARM NOTES

Root crops, such as beet, carrot and parsnip, should be carefully weeded and thinned while the plants are still small. Parsnips should be thinned to about four inches apart; Swede turnips six to eight inches. Carrots may be thinned to one inch apart and, when large enough to use, alternate rows pulled, leaving the remainder about two inches apart. Garden beets may be similarly handled, but the final distance in this case should be about four inches. As beet tops make a very delicious early green vegetable, thinning should be done so that these tops may grow to a useable size. The soil should be kept cultivated and never allowed to bake or harden. This is particularly true with peas and beans if a tender, succulent crop is desired. Beans, however, should not be cultivated when moist with either rain or dew, as the plants, if injured under these conditions, are particularly subject to bean rust (the spores of this disease developing in the injured tissues).

Corn that has been sown in hills should be thinned to three or four plants to a hill, if the hills are two to two and a half feet apart. Cabbage and cauliflower plants require eighteen to twenty inches of space to each plant in the row, and the rows should be two and a half feet apart. The soil should be kept well hoed to conserve the moisture and encourage rapid growth. Where space is limited tomatoes may be grown in rows three feet apart and the plants eighteen

inches apart in the rows and tied up to stakes. Corn, tomatoes, cucumbers, squash, pumpkins and melons all grow in a hill, the hills spaced about three feet apart; squash and pumpkin three or four plants in a hill and the hills six to eight feet apart. Where the soil is rich and warm and space limited, hills of cucumber, squash and pumpkin may be planted between alternate rows of corn.

Potatoes should be thoroughly cultivated to conserve all possible moisture "ridging up" also supply the tubers with loose soil in which to develop. However, in areas where there is a light summer rainfall, level cultivation will conserve the limited soil moisture more satisfactorily. Spraying should not be delayed until there are signs of injury from the well-known potato beetle, or

The Pirates' Hoard

RAISE PIGS PROFITABLY

Mustard Can Be Controlled by Spraying.

Spray should be applied on calm, clear day as soon as first few Mustard plants show flowers. (Contributed by Ontario Department of Agriculture, Toronto.)

ANIMALS, no matter what kind, always put on weight most cheaply when they are young and the younger they are the cheaper the gains. As a consequence of this it is essential that the man raising young stock realize this and give a reasonable amount of attention to the young animals he is rearing. A few days before farrowing the sow should be brought into the pen so that she may become accustomed to her surroundings. A close watch should be kept on her during these days in order to ward off constipation, which is the bugbear of a great many swine breeders. Once this condition occurs very little can be done, so it is a matter of prevention rather than cure. When the animal is taken into the new quarter her feed should be sloppy and of a laxative nature, a liberal supply of roots and a small amount of linseed oil meal helping to bring about this condition. The meal ration for a brood sow may consist of equal parts ground oats and wheat middlings.

At the time of farrowing the sow should be left alone but the attendant should be keeping a watch on her to see that no trouble arises. After farrowing the sow should not be disturbed for ten to twelve hours and her first feed should be little more than a drink of water with a little middlings in it. After this the ration may be increased to full feed, taking eight to ten days to do so. When the young pigs are weaned the ration should be cut down to stop the secretion of milk and, if it is necessary, turn the sow in with the young pigs once a day for a few days. If, when the pigs are born, they are good and strong and vigorous they should be left alone for a while and as soon as the right time arrives they should be placed to the teat to suck as soon as possible. If the pigs are vigorous and healthy, nothing special need be done for them until they are two or three weeks old, by which time they should have learned to eat a little bit by picking around their mother's trough. At this time, if it is convenient, a small trough, away from the large trough, should be provided and the youngsters should be given skim milk with a little middlings stirred into it. As the pigs grow older more middlings may be stirred into the milk.

Outdoor exercise is very important for young pigs and every means should be used to induce the young pigs to take it. In this connection must be taken to protect the youngsters from cold winds and the hot sun. If the sow is turned out with the pigs she should not be given too much range at first unless the little fellows become unduly tired as a result of travelling too far.

Boar pigs not intended for breeding purposes should be castrated before weaning to get the best results, though there is not much danger in castrating at a later date provided care is observed in connection with the operation. Clean hands and instruments and disinfectant on the wound will overcome all danger of infection.—J. McBeath, B.S.A., O. A. College, Guelph.

Spraying With Iron Sulphate to Prevent Mustard From Seeding

Iron sulphate or copperas can be successfully used to prevent Mustard from seeding in standing grain without injury to the crop.

Preparation of Solution.—A 20 per cent. solution should be applied. This can be prepared by dissolving 80 lbs. of iron sulphate in 40 gallons of water. Iron sulphate is dissolved quite readily in cold water. The solution should be strained through a cheese cloth as it is put into the spray pump tank. This will remove dirt and small particles that are apt to clog the nozzles.

Time to Apply.—Apply on a calm, clear day just as soon as the first few plants in the fields show flowers. It is very important to spray early. If the plants are left too long the treatment is not nearly so effective. If a heavy rain comes within 24 hours after the solution is applied, it will be necessary to spray again.

How to Apply the Solution.—An ordinary hand-pump barrel sprayer such as is employed to spray fruit trees may be used, or a potato sprayer can be rigged up to do the work. Many of the up-to-date potato sprayers have a special broadcast attachment for spraying weeds. These are excellent for large areas, as they cover a wide strip at each round. Care must be taken to see that every mustard plant is covered with the solution in the form of a fine spray. Iron sulphate may be obtained at any hardware store or from the Nichols Chemical Co., Toronto. In wholesale lots it is better purchased from this company, who can supply it much cheaper in large quantities than it can be purchased at local hardware stores.—J. E. Howitt, O. A. College, Guelph.

Selling Cream Pays.

Selling whole milk robs the young things on the farm—often the farmer's own children, of needed milk-supply, hence many farmers are content with less ready cash secured by selling cream in order to have better and more live-stock, and consequently richer soil, which, after all, is the basis of good farming.—Prof. H. H. Dean, O. A. College, Guelph.

Chief of Police Findlay seized six gallons of beer belonging to John Wright at the Black Hills plantation St. Mary's.

TO MAKE KINGSTON A NATIONAL HARBOR

KINGSTON, June 13.—Chief Engineer Chapleau of the Department of Public Works, Ottawa, and C. D. Howe, elevator engineer of Port Arthur, are to meet in Kingston tomorrow and go over the harbor with a view to selecting points best suited for the erection of Government grain elevators in connection with the proposal for making Kingston a national harbor and equipping it as a port-of-the-lakes terminal for the grain transshipping trade with the new Welland Canal is completed. Public Works Engineers have completed their plans for proposed deepening of the harbor so as to provide for a 22-foot channel.

CITY OF ST. CATHARINES

Taxes Year 1919

Under the authority of By-law No. 3200 passed on the 25th day of March, 1919, notice is hereby given that all taxes for the year 1919 are now due and payable but may be paid in three instalments as follows, subject to the following exceptions and conditions.

Taxes which are not payable by instalments.

Taxes in income Assessment, Arrears of Taxes and charges collectable as taxes for any work done or services rendered by the Corporation are due and payable in bulk on or before the 25th day of June, 1919 (and not by instalments.)

Payment by Instalments

1st. Instalment—due and payable on or before the 25th June 1919. One-half of the taxes will be the amount of the 1st. Instalment.

2nd. Instalment—due and payable on or before the 25th September 1919. One-quarter of the taxes will be the amount of the 2nd. Instalment.

3rd. Instalment—due and payable on or before the 25th November, 1919. One-quarter of the taxes will be the amount of the 3rd. Instalment.

Taxes not paid when due.

If default is made in the payment of any instalment on the above dates, the privilege of payment by instalment becomes cancelled and the whole of the taxes or the balance unpaid, as the case may be, at once becomes due and payable together with percentages in addition, as follows:

Upon default in payment of taxes on the dates appointed,

Penalty 1% On amounts paid within ten days of time of such default, a percentage charge of one per cent. will be collected.

Penalty 2% On amounts paid within twenty days of time of such default, a percentage charge of two per cent. will be collected.

Penalty 3% On amounts paid within thirty days of time of such default, a percentage charge of three per cent. will be collected.

Penalty 5% On amounts remaining unpaid after thirty days of time of such default, a percentage charge of five per cent. will be collected.

Failure to pay the above instalments of taxes as they become due not only forfeits the right of settlement by instalments but brings the parties under the penalty of the Assessment Law, which enacts, that in case any party shall REFUSE OR NEGLECT to pay the same imposed upon him for the space of fourteen days after demand, the Collector shall levy the same, with costs, by distress and sale of the goods and chattels of the party who ought to pay the same.

1. Ratepayers who do not receive their tax bills by the 1st day of June should notify Tax Collector's Department of the fact.

2. Cheques tendered in payment of taxes must be "marked" by bank and made payable at par to the City of St. Catharines.

3. Taxpayers sending amounts by mail for payment of taxes should also enclose the tax bill and a self-addressed and stamped envelope for the return of receipted Tax-bill.

4. Taxes are payable at the office of City Tax Collector.

STUART K. WATT, City Treasurer. CITY TREASURER'S OFFICE, ST. CATHARINES, 17th May, 1919. m19/31/16/14/18/21
