

Royal Commission to investigate Cancer in  
the Province - incidence of cases, mortality, measures  
to be taken for early detection & treatment, organization  
of diagnostic & treatment centres.

Is that independent action better than the formation  
of a Branch of the B.C.C.C. - composed of interested  
Citizens?

Saskatchewan has already formed a Branch of  
the B.C.C.C. The Provincial Minister of Health  
took the initiative & I do not know to what  
extent the citizens are actively interested.

Perhaps Captain Chapman has received reports  
of their organization detail & has some helpful  
Constructive criticism.

I am acquainted with Lemmon's work &  
theories. In fact, I am at the present time trying  
out his chemical destructive plan on an apparently  
hopeless case of sarcoma.

We write you are returning to Edinburgh & hope  
that Brother will be back during your stay.

He spent his Easter holidays (from March 18) in Dublin  
doing special work in the Rotunda Hospital. I expect  
he will be returning to Edinburgh about April 10.

We are sure Barbara will have a good time with  
you.

Kindest regards from us all to you both.

Yours sincerely  
Alfred T. Bazin
