A BOON IN HARBOR?

Borings Near Navy Island Revealed Ledge of Gold Bearing Quartz—40 Feet Below Low Water.

An interesting discovery has been made by the officials of the Dominion Department of Public Works, who have been conducting boring operations near Navy Island with a view of determining the available depth of water in towards Wellington slip, where it is proposed to run the ferry boats when the needs of the harbor demand the use of Rodney wharf for big vessels. The borings have revealed the existence of a ledge of gold bearing quartz about 40 feet below low water, and not far from Navy Island. While the explorations have not been as yet sufficiently extensive to tell much about the value of the quartz, or the way the ledge runs, it is believed to be rather extensive, and that it should be found not very far below the surface of the land on both the Carleton and city sides of the harbor.
