LOW COST ACCELERATORS FOR HIGH PERFORMANCE EDUCATIONS.

Computerworld offers students and faculty alike unparalleled performance at unbeatable prices.

Our high quality/high volume policy enables us to sell top of the line equipment at down to earth prices.

By far the most popular system for educational and related usage is our Packard Bell Package. Fully IBM-compatible, this innovative unit is the most powerful in its class.

The system comes with all features most computer users require built on the motherboard: a parallel port, a serial port, a real time clock, dual floppy drive controller and switchable RGB/Hercules compatible monographics video output.

Plus, the system also offers four unused expansion slots, 640K RAM, a reset button, LED power indicator, switchable 110/220 V power, tilt-swivel TTL monitor, AT style keyboard, and MS-DOS 3.2 with GW BASIC.

Fortunately, if none of the above means anything to you, and you are interested in a computer, our helpful staff will explain everything. It's really quite simple.

On the other hand, if you do know something about computers, you'll agree that this is good stuff.

Check out our prices below, then check out our goods in person. And get your mind in gear.

COMPUTERWORLD
