practicable to *Wire Existing Gas Fixtures*, or supply new *Combination Fixtures*, on which can be used electric light or gas, or both.

Each special case can be treated as best suits the taste, requirements and the amount the customer wishes to invest.

To those who desire more detailed information on these matters we suggest a visit to our show rooms, where we will at all times be pleased to exhibit and explain the various styles of fixtures, or we will, on application, have a salesman call with an illustrated catalogue in which many designs can be seen, and selections made therefrom.

it is

ORNAMENTAL LAMPS in ground glass, and in various attractive colors for floral designs, decorative work, special illuminations, etc., can be secured at slight extra cost.

SERVICES TO HOUSES.

This Company, upon application, will put in services to the premises of consumers, and furnish and attach meters in cellars free of charge.

WIRING.

The wiring of the interior of buildings for electric light should be done by wiremen of undoubted experience and reliability, and the current should never be turned on, or the contractor paid in full, until it has been thoroughly inspected, and approved by this Company. The Edison current is so mild that there is no possible danger to life or limb under any conditions.

Safety fuses are inserted at all branches and starting points, and the proper sizes of all wires are carefully calculated by us, so that if the Edison system as perfected is adhered to, the SAFETY IS GREATER than with any other form of illumination known.
