

One Cent Brings It

WOULD-YOU-LIKE-TO-READ-THE-STORY OF-THE FURNACE?

- Just how correct principles say it should be constructed?
- Just why no other plan of construction will do?
- Just wherein lies its ability to be easy on fuel, quick in action, simple in operation?

The story is briefly told in a little booklet called "Furnace Facts." It's not an advertisement. No furnace name is mentioned, and you can read the whole story in 5 minutes.

To the party contemplating purchasing a furnace it points out the snags and pitfalls, and shows exactly what demand of an architect, contractor or dealer, in furnace construction and installation.

"SUCCESS" MANURE SPREADER

HAS MANY EXCLUSIVE FEATURES.

No complicated, troublesome, easily-broken clutches, levers, gears, etc., are used to drive Beater on "Success" Manure Spreader.

Power is supplied by direct heavy chain drive—a simpler, stronger, easier-working mechanism than used on any other manure spreader.

Note the reciprocating gears on beater drive.

The driving mechanism is held securely in place by a HEAVY-BRACED STUD, which is entirely absent from common manure spreaders.

This direct drive gives the "Success" lighter draft, too—fully 25% lighter than any other machine.

And our BEATER FREEING DEVICE is a wonder. Simultaneously with the throwing of the spreader into gear the Beater is automatically moved back from contact with the manure. Has lots of time to get up speed before manure strikes it. This prevents all possibility of a strain in starting.

Remember, too, the "Success" has the LARGEST AND STRONGEST REAR AXLE and drives from both sides. This is of immense importance.

If you want the simplest, strongest, easiest-working manure spreader on the market, you will buy the "Success."

Write for our Free Illustrated Catalogue. It tells all about the "Success" in detail.

De Laval Cream SEPARATORS

—Make—

HARD TIMES EASY!

The
De Laval Separator Co.

173-177 William St. MONTREAL

This is an article that is worth your while to investigate. If you should ask why we do not make a light wire fence, our answer would be, because it does not pay the farmer to buy it, for it does not last.

Standard Woven Wire Fence

is made of No. 9 hard drawn steel wire throughout and is well galvanized. The fence is well crimped to allow for contraction and expansion. **The Tie That Binds** is Patented, and is a lock that will not slip, and is very smooth.

One Half

THE BINDER TWINE SOLD IN CANADA IN 1907 WAS DEERING MCCORMICK AND INTERNATIONAL BRANDS

FIFTY per cent of the binder twine used in Canada for the 1907 harvest was Deering, McCormick and International twine. Why? Because these brands give such universal satisfaction that farmers depend upon them. Farmers who use short length and imperfect twine during one season will profit by their mistake and see to it that they get a brand which has full length, full strength, and evenness of strand to recommend it.

Are you one of the farmers who used short length twine last year? If you are you did not buy Deering, McCormick or International twine, for these twines are always full length, full strength, and comply with the requirements of the government inspectors.

This is the reason for the growing increase in the use of Deering, McCormick and International twine. These brands are guaranteed to stand a breaking test of 50 to 85 pounds, and to have average lengths as follows:

Sisal,	500 feet per pound
Standard,	500 " " "
Manila,	600 " " "
Pure Manila,	650 " " "

These brands of twine are also remarkably free from swells and bunches of tow; a comparison with other brands will convince you of this.

It will pay you to call on the local dealer and inspect these brands of twine before making a purchase. Or write to the nearest branch house for further information.
