S. Tennis Association.

VOTED NEW SCORING SYSTEM.

They've taken the "love" out of tennis. The "dunce," too, will leave the net deck, along with all the old tag vernacular.

No more will the cry of "love" be heard from the courts, for the supreme council of tennis has voted it out.

Tennis has been decreed a man's game by the powers of the court. It will be scored in a man's manner. The executive committee of the United States Lawn Tennis Association has voted in favor of new scoring system of numerical designation known as the "one, two, three" system.

Here's Loveless Ruling.

The new rule speaks for itself: If the server wins the first point, the score is called "one"; if the receiver wins the first point, the score is called "one out." If the server wins one point the score is called "one all"; if the server

wins the next point the score is called "two in."

"If the receiver wins the next point it is called 'one two.' The scoring is continued in this manner until either player has won four points. The game then is called for the player until the other player has scored three points; when the score is called 'four, three' or 'three, four,' as the case may be and the game is then scored for the player who first thereafter gains a lead of two points.

Hazy wording of the old foot fault ruling also has been cleared up in a substitute clause which provides that the server must keep both feet back of the line until the racket strikes the ball.

The main purpose of the foot fault ruling is to prevent the server from taking an unfair advantage in getting to the net. It was the judgment of the committee that the purpose was accepted when the server is kept back of the base line until the racket strikes the ball, as it makes little difference what he does thereafter.

Radical revision also has been made in the method of handicapping. A simple table replaces the elaborate computations that have been required for the handicaps of the past.

New Rule on Handicaps.
The new ruling is: "The method of handicapping shall consist of allotting to each player one or more points in a set. These points are to be added to the points scored by each player in that set. The points scored shall be recorded at the end of each game and at the conclusion of the set the allotted handicaps shall be added to this total. The player then having the match regardless of the number of games won or lost."

The changes were determined upon after three months' deliberation by S. Wallis Merrihew, Edward C. Coit, Benis C. Wright, Abraham Bassford, Watson M. Washburn, Samuel Hardy and R. Norris Williams II.

The only ornaments on some winter hats are large, decorative hat pins.

What Makes the Colors of the Sunset.

The direction of the sun's rays when they meet these large and small particles in the air has a great deal to do with the combination of colors that result as these objects absorb part of the rays and throw off others. The sky is the most beautiful blue when the sun is high in the sky. But when the sun is setting the light has a greater distance to travel through the belt of air which surrounds the earth than when it is high up over our heads. You know that if you tack a pin straight down into an orange it won't go in very far before it is clear through the peel, but if you stick the pin into an orange along the edge it will go through a great deal more of the peel than the other way. That is the way with the sunset colors. The peel of the orange is a good representation of the belt of air which surrounds the earth. At sunset the light instead of coming straight down through the belt of air, thus meeting the eye through the shortest possible amount of air, strikes the air on a slant, and, therefore, travels through a great deal more air and closer to the earth to reach it, with the result that it meets a great many more of these little specks, besides all the smoke and other things than hang in the air near the ground, and we thus get many more colors, because some of the things in the air absorb some of the rays and others absorb very different rays when the light comes in this slanting way, and that is what makes the different colors in the sunset. For this reason sunsets are often richer and more beautiful in color when the air is not so pure, but has much dirt and other matter floating about in it.

EASY VOWS.

It's easy on a New Year's day, to rise and say, "We'll booze no more; we'll throw the demijohn away—the water wagon's at the door." Thus men would vow, in olden times, when they could pick and choose. They would abandon sins and crimes, the chief of which were based on booze. The water wagon goes its way, and there is room for every toff, for every rube and hick and Jay, and when they're on they can't fall off. In olden days the men of vows would boast that they had cut out gin, and they had haloes o'er their brows, and were all pure and white within. A while they kept their vows on straight, their high endeavors moved the heart, but in six weeks, or maybe eight, they lost their places on the cart. But now the cart is barred about with hoght fencing none can bend, and it's a cinch that every scout will go the journey to the end. There is no soothing morning horn, the winecup's broken at the stem; men used to cut out Barleycorn, now Barleycorn has cut out them.

When He Wilted.
There is a distinct frigidity to the atmosphere in the home of Isaac Wilt, retired farmer, in Valparaiso, whenever the subject of groceries and delivery boys is mentioned in the hearing of the master of the household. There's a reason: Mrs. Wilt telephoned a C. O. D. order. There was the customary delay in delivery and Mrs. Wilt stepped across the street to a neighbor's, leaving Mr. Wilt to receive and pay for the groceries.

The boy with an armful arrived and laid his load on the table. Mr. Wilt scanned the bill and paid it from a pocketbook in which reposed five \$20 bills. He laid the purse on the table and proceeded to confirm the bill by an inspection of the goods, depositing the wrappings on that part of the table where the pocketbook lay. Everything being found satisfactory, he swept the wrappings and purse into a bundle and threw it into the stove.

so precisely has the selection of suitable plants been made that it is possible to tell the time of day by the opening of any one flower. The plants are arranged in the following order: 1, rose; 2, heliotrope; 3, water lily; 4, hyacinth; 5, convolvulus; 6, geranium; 7, mignonette; 8, carnation; 9, cactus; 10, lilac; 11, pansy; 12, violet. The originator claims that a botanist can tell the time by this means or within a few minutes. In Brazil there is a variety of magnolia which, for a few weeks in the year, opens and closes at the same hour every day, regardless of both light and temperature. Certain of the natives, who know neither clocks nor watches, invariably gauge the time by this flower.

CARBONA Cleaning Fluid removes grease spots without injury to fabric or color. Cleans silk, satin, velvet, velour, flannel, serge, lace, wool, chiffon, cashmere, cottons, white kid shoes and gloves, feathers, upholstery, etc., with entire satisfaction. Selling 35c. per bottle at BISHOP, SONS & CO., LTD., Dry Goods Department.

Edward's Liniment Cures Dandruff.

What Does Health Mean to You?

HAVE you ever waited to think out the answer to that question? Or are you like the great majority, who only appreciate good health after it is lost?

Slowly, but certainly, we are getting round to the idea of preserving health so as to avoid serious disease.

The old way of waiting until you are seriously ill before sending for the doctor is all wrong.

We all know the old saying, "an ounce of prevention is worth a pound of cure," but we neglect to carry it out in actual practice.

If you are familiar with Dr. Chase's Receipt Book you know that "Dr. Chase's Plan of Health" is built up on this idea of preventing disease, and the same applies to his well-known medicines.

Take Dr. Chase's Nerve Food for example. This food cure has established a wonderful record as a cure for nervous prostration, nervous exhaustion, nervous headaches and indigestion, and all forms of nervous disorders. And yet above all it is recommended as a means of keeping the blood rich, the nervous system in good condition and thereby preventing serious nervous disorders.

To most of us our health is our working capital.

We cannot afford time or money for rest cure in a sanitarium or expensive trips down South. For this reason we must seek other means of keeping the health up to high water mark.

So long as the blood is kept rich and pure the nervous system is well nourished, and it is by this means that Dr. Chase's Nerve Food effects such splendid results in the building up of the system when there are signs of exhaustion.

When you cannot sleep and begin to feel tired and irritable it is time to call in the aid of Dr. Chase's Nerve Food. You may also find your appetite falling and your digestion slow, for as the nerves become exhausted every organ of the human body is bound to lag in its work.

Dr. Chase's Nerve Food, 50 cents a box, 6 for \$2.75, all dealers, or Edmanston, Bates & Co., Limited, Toronto. Every box of the genuine bears the portrait and signature of A. W. Chase, M.D., the famous Receipt Book author.

Flowers That Tell the Time.

A clock composed entirely of growing plants and flowers has been made by a botanist. The dial of this clock which is to be seen in a glasshouse at the Botanical Gardens just outside Paris, is simply a large circular flower-bed with twelve divisions, one for each hour of daylight. In each division a certain plant is growing, and
