

FREDERICTON, N. B., WEDNESDAY, AUGUST 27. 1884.

VOL. V., NO. 52

TE **11** **1** **1** **1** **1** **1**

Save the seed patches of timothy
meadows for seed.

Young orchards should always be
kept cultivated.

Don't plough more land for your
wheat than you can manure well.

Don't let your fowls roost where
their refuse will be lost.

No thieves in well guarded, houses
or fields.

The farm should compare in size
and quality with the farmer's brain.

In this season idle boys and idlers
land will give you endless trouble in
the future.

A Georgia farmer has threshed
over 100 bushels of wheat to the
acre from his new crop.

The peach crop of Delaware is
estimated to reach 10,000,000 baskets
the largest since 1875.

Nebrasks sets a good sample in
the use of the

One important result of tillage is that the soil is beneficially exposed to

The FARMER is acknowledged to be the best conducted family newspaper published in Fredericton. It has a wide circulation, a fine advertising patronage, and its news is varied and reliable.

According to *Vick's Magazine* soon from coal is preferable to that from wood, and either kind is not only an excellent manure for any crop, but especially useful for dusting on cabbage, turnip, radish and other vegetables to repel insects.

Meal should always be mixed with

boiling water, which partially cooks the food. A common error is to make

An ingenious farmer makes scows out of old tin cans, tomato cans and the like, by rigging them up with a bit of old iron suspended in them so like the tongue of a bell, and hanging them up in the cornfield where the wind will set them a ringing, making such an unusual and unexpected noise that crows will not dare remain in the field.

A. N. Y. Tribune writer uses butter-milk to kill ticks on sheep, applying it freely along the back so that it will run down the sides. By adding a half a pint of kerosene oil to a gallon of buttermilk, and beating it with a whisk to an emulsion, this remedy is

is a very active insecticide, and the milk dilutes it so as to render it harm-

The cattle and sheep raising interests in New Mexico are growing to large proportions, and the industry is rapidly being invested in the business which yields handsome returns. It is claimed that New Mexico is the best stock-raising country in the West. The grasses are rich, nutritious and plentiful, while in many localities the water is pure and there is no doubt it has been demonstrated that artesian wells will supply the deficiency of small expense.

The members of the Elмира, New York Farmers' Club, talked over the merits of peas and corn as food for fattening swine. One member had found peas equal to corn except as regards the quantity of the pork. Meat obtained from swine fed on peas was

more oily than that made from corn but otherwise was quite as good. An

peas as food for cows in milk. Feas-
tend to increase the supply and keep
it steady.

Many farmers land the practice of
feeding a variety of foods to their
stock in winter, and yet in summer
no variety at all is supposed to be
necessary; that is, their pasture con-
tains only one or two kinds of grasses.
Variety is necessary always, summer as
well as winter; and the farmer who
sows a variety of grasses and clover
can let his stock enjoy fresh early
pasture, and then, when the winter
comes, he can give them the best of
all the intermediate time. Thus his
stock gets a long season's pasturage, as well
as a fresh, healthful and productive
one.

There is a beautiful crop of peaches
in Delaware this year. The Delaware

er thirty cars through, direct to Boston, each day through the week.

A cat carries one hundred and fifty cents; the freight is forty cents; the dealer gets ten per cent commission for selling and it costs the grower \$1.25 a basket, the grower gets fifty-three cents after sorting and laying them on the train.

A new horseshoe has lately been experimented with at Lyons, France, and it is made of sheep horn, and is found particularly adapted to the employment it towns and known not to have a steady foot on the pavement, and the results of the experiments have proved very satisfactory, as horseshoes thus shod have been driven at a rapid pace on pavement without slipping. Best of all, the shoe is cheap, and is very durable and therefore pays, both in the long and short run.

little more expensive than the old one, seems destined sooner or later to

Sampson lost his strength with his hair. Hundreds of men and women loose their beauty with theirs, and hundreds have saved their hair from falling out, and many have grown a beautiful head of hair by using "Miles and Liniment," it is perfectly clean and always cools and refreshes the fevered head.

STORIA DELLA.
