"Men the fair season was unfolding, the complete the control of the complete the control of the

actually happened in this city a few years ago, and the man was taken out of his ice-box dead as a herring and stiff as a pike-staff.

Antidote to Phosphorus Poisoning.—
The value of oil of turpentine as a remedy in cases of phosphorus poisoning is well

the dentist.
In conclusion the article says: These In conclusion the article says: These remarks seem to be necessary, because ice is abundant and cheap this year, and the water drinkers are increasing in numbers, through the missionary efforts of the disciples of Francis Murphy. There is no objection, certainly, to the exclusive use of water, if taken as the Creator intended it should be. It is the excessive use of water, reduced below its average temperature with ice, that is to be condemned. It is an abuse of the stomach to put fluids that infile me its coatings and finally eat them away. We must put ice water and whisky into the same index expuryatorius. They into the same index expurgatorius. They lighted should be banished from private tables and bar queting halls, or used only to preserve articles of food in pickle or in the refrige A

Something worth Remembering.—Men are drowned by raising their arms above pressent unbuoyed weight of which deneither motions. Other animals have lar manner and therefore water, nearly, rise to the surface and continue there if he does not elevate his hands. If he moves his hands under water in any way he pleases, his head will rise so high as to give free liberty to breathe, and if he will use his legs, as in the act of walking (or rather walking upstairs), his shoulders will rise above the water, so that he may use less exertion with his hands, or apply them to other purposes. These plain directions are recommended to the recollection of those who have not learned to swim in their worth, as there was he found that the worth is that at Newton, in that state, a mad dog.

MEN OF STRAW."—THE ORIGIN OF THE PHLASE.

actually happened in this city a few years ago, and the man was taken out of his icebox dead as a herring and stiff as a pike-staff.

Ice water arrests digestion, if it does not absolutely drive out all animal heat, and it is not resumed till the water is raised to the temperature required to carry it on.

Habitual lee water drinkers are usually very flabby about the region of the stomach. They complain that their food lies heavy on that patient organ. They taste their dinner for hours after it is bolted. They cultivate the use of stimulants to aid digestion. If they are intelligent they read up on food and what the physiologists have to say about it—how long it takes cabbage and pork and beans and potatoes and other meats and esculents to go through the process of assimilation. They roar at new bread and hot cakes and fried meat, imagining these to have been the cause of their maddles.

But the water goes down all the same, and finally friends are called in to take a farewell look at one who a mysterious Providence has called to a clime where, so far as we know, lee water is not used. The number of immortal beings who go hence to return no more on account of an injudicious use of ice water can hardly be estimated.

The article further goes on to show that in numberless cases fine teeth are totally destroyed by its use. It chills the teeth and cracks the enamel, then follows rapid decay and frequent visits to the office of the dentist.

In conclusion the article says: These summers to be precessary because ice summers to be precessary because ice.

rise up, which burst into flame when a lighted match is applied. -- North Sydney
