ROYAL MAIL SERVICE

New Triple Screw Turbine Engined Steamers Victorian and Virginian, 12,000 tons. Twin Screw Steamers Bavarian and Tunisian, each 10,500 tons. Average time of passage from Port to Port 8 days

**Also Fortnightly Sailings to Havre, France**

All the vessels in these services are provided with cold storage accommodation, and the system of fan ventilation is very complete. The facilities provided are unsurpassed for the carriage of all classes of dairy products and fruit. The special attention of apple exporters is called to the fact that the vessels of the London Line now discharge in the Surrey Commercial Dock Co's Greenland Dock, which is in close proximity to all the London fruit centres.

**G. E. BUNTING**, Travelling Freight Agent for Ont.

"STANDARD" mounted outfit. Both these and the "DUPLEX" can be mounted low, if so desired.

"The Wallace Standard Power Sprayer which we have been using for two seasons has given excellent satisfaction. We have always been able to get all the pressure required when using a 19-nozzle Spar in continuous driving along the rows, and have also used 8-nozzle Cluster to spray while standing at every tree. We have been able to keep sufficient mixture in pressure tank to spray any of our trees, as we think thoroughly, with either Spar or Clusters, the trees being about 40 ft. in diam. and 30 ft. high. The only trouble we have had occurred when a couple of nuts worked loose.

13th Dec., 1905.

Yours respectfully,  
**E. G. BECKETT**,  
Hamilton.

# Wallace Power Sprayers

## ARE STRICTLY COMPRESSED AIR MACHINES

*Power Costs Absolutely Nothing*

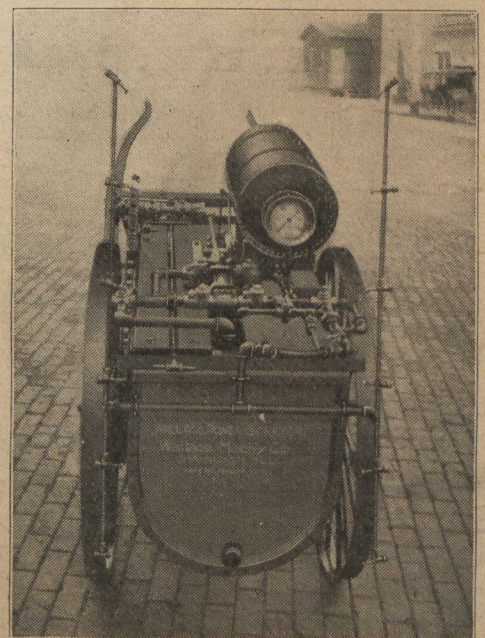

No hand pumping whatever. Are run by 15 and 17 year old Indians; you should be their equal, surely.

**Save their cost in a very short time. \$10 to \$20 per day saved on each full day's work.**

Sprays thoroughly the largest trees or smallest fruits, potatoes, mustard, etc. Abundant volume to work while standing at a tree. A number are now in use here in Canada.

*The Wallace Machines prove their superiority when given the opportunity.*

Don't fail to order early—by 15th January—as we have carloads to supply, and you may delay too long.

"JUNIOR" arranged for nursery. It will develop equal pressure with the larger machines. Built to 6 foot track when wanted.
