

Massey-Harris Cultivators & Seeders.

THE NEW MASSEY-HARRIS STEEL FRAME CULTIVATOR.

Our New Massey-Harris Cultivator

eclipses anything previously attempted. It is a triumph, and its great popularity proves its wide-spread usefulness. It works well in any kind of land. It stirs up the soil at any uniform depth desired, and has the necessary mechanism to adapt it to all conditions of ground and for regulating depth of cultivating. We here illustrate some special features of this machine.

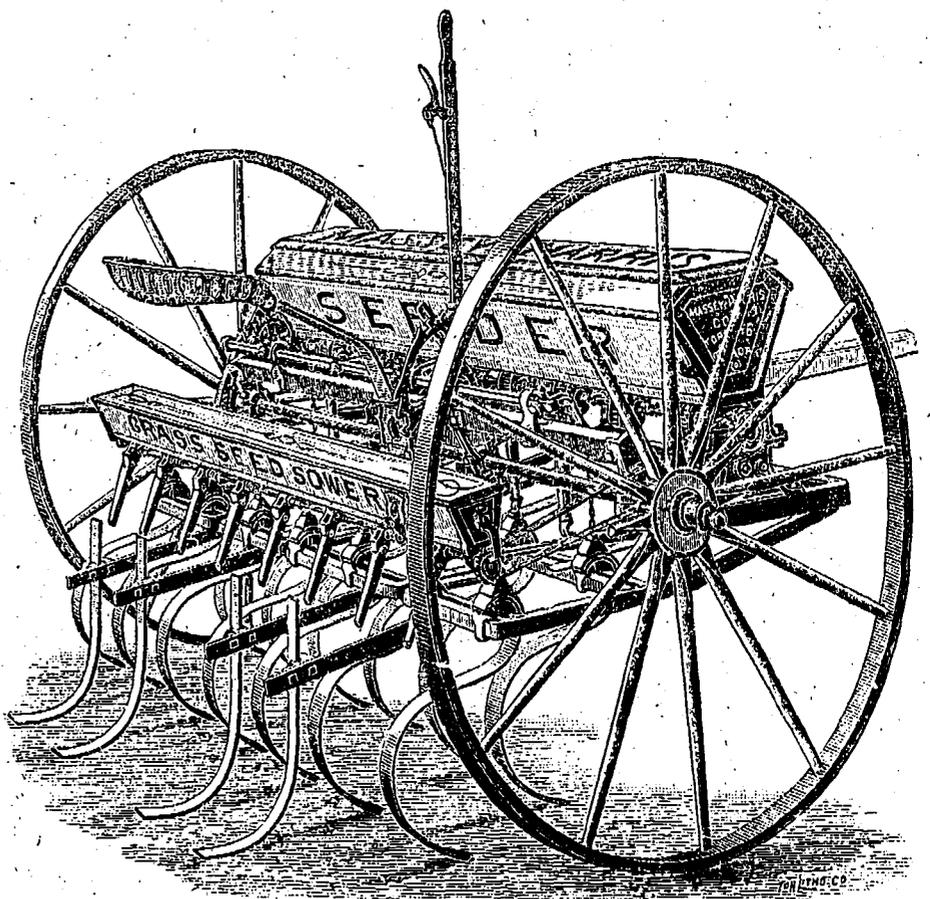

The Massey-Harris Sectional Seeder

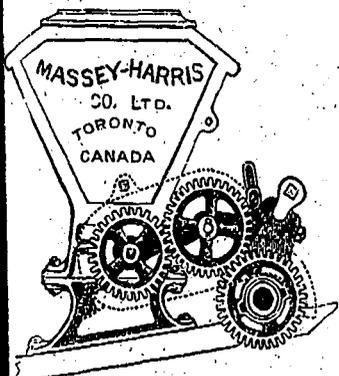

is a splendid machine. It thoroughly works all kinds of soil, even clay, and the peculiar motion of the Springing Teeth causes them to cover the seed perfectly. The Teeth are fastened to Frames in sections, thus allowing them to work equally well on rough or smooth land. A Grass Seed Box with Distributors may be purchased with this machine if desired. It is attached so as to sow the fine seed behind the teeth, thus preventing its being covered too deeply.

The Driving Gear is extremely simple and cannot get out of order. We illustrate it here.

Write for our catalogue giving full description of both these excellent machines.

Massey-Harris Sectional Seeder with Grass Seed Sower, Complete.
