

	Page
To find <i>at once</i> the decimal equivalent to any number of shillings, pence, &c.,	164
To find the number of shillings, &c., equivalent to a decimal,	166
Circulating Decimals,	166
To change a circulating decimal into its equivalent vulgar fraction,	167
When a vulgar fraction will give a finite decimal,	170
The number of decimal places in a finite decimal,	170
The number of digits in the period of a circulate,	171
— When a circulating decimal will contain a finite part,	172
Contractions in multiplication and division, derived from the properties of fractions,	173
SECTION V.—Proportion,	176
Nature of ratios,	177
Nature of Proportion,	179
To find the arithmetical mean of two quantities,	181
To find a fourth proportional, when the first term is unity,	184
— When the second or third term is unity,	184
To find the geometrical mean of two quantities,	184
Properties of a geometrical proportion,	185
Rule of Simple Proportion,	185
— When the first and second terms are not of the same, or contain different denominations,	190
— When the third term contains more than one denomination,	192
— If fractions or mixed numbers are found in any of the terms,	195
Rule of Compound Proportion,	202
To abbreviate the process,	204

 PART II.

SECTION VI.—Practice,	209
To find aliquot parts,	209
To find the price of one denomination, that of a higher being given,	211
