BEST VARIETIES POTATO YIELD

The Experimental Farm Notes Show Results of Interest to Potato Growers.

With but four exceptions all of the twenty best yielders at the Fredericton Experimental Station, are white skinned and of either the Green Mountain, Cobbler or Burbank type.

The highest average yield for three years (187 bushels per acre was obtained from Seedling 13469, bred by Prof. Wm. Stuart, of Washington. This is a Green Mountain type potato, fairly late in maturing, of beautiful smooth appearance and high table quality. The plants also seem to be very disease resistant.

The second in the list with 456 bushels per acre (3 years average) is a strain of Delaware, improved by W. H. Moore, Scotch Lake, N. B. This potato is commercially a Green Mountain, and in every way resembles that type except that it may be slightly thicker and not quite so rectangular. Very resistant to disease and of high table quality.

The fourth is Seedling 4227, bred by Prof. Wm. Stuart, of Washington, with a three year average yield of 452 bushels per acre. This potato is longish, of the Burbank type, and of high table quality.

The fifth is Seedling 3073, bred by Prof. Wm. Stuart, of Washington, with a three year average yield of 427 bushels per acre, it is similar to Seedling 4227.

The sixth is a blue black potato following the Kidney type, bred by Dr. Whitney, St. Stephen, N. B., and developed at the Fredericton Station. It is practically indistinguishable from a variety known as McCulloch. Very disease resistant and a vigorous plant. It is a great keeper and of excellent table quality. The average yield for three years was 415 bushels per acre.

The seventh is Deers Standard, a long white (Burbank) type of excellent quality, but not so disease resistant as those above with an average yield for six years of 414 bushels per acre.

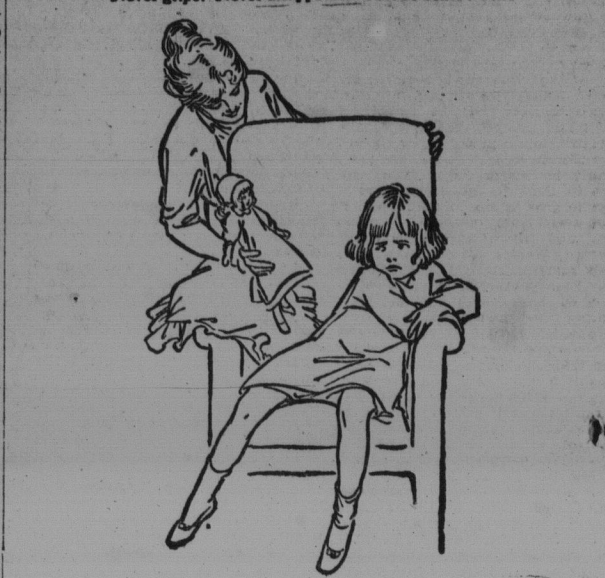

The eighth is Green Mountain (Lowell's strain) with eyes a trifle deeper than the other strains of Green Mountains, but otherwise just as good and the plant is much more disease resistant and more vigorous. The four year average yield was 410 bushels per acre.

The ninth is Irish Cobbler with a four year average yield of 406 bushels per acre. This potato is an early maturator and has the two peculiar qualities of yielding tubers that are always dry and good no matter how young the dug and which will keep hard and dry until the following June. The eyes are rather deep and when yielding heavily it is liable to grow rather rough and have hollow heart.

Then following in order of yield we have Langworthy with 399 bushels Morgan's Pink Seedling, 397, Vick's Extra, 396; Cumming Pride, 395; Dureka, Extra Early, 385; Early Everett, 379; Houlton Rose, 375; Wm. McGregor, 375; Pierremont Seedling, 373; Empire State, 370, and Dalmeny Beauty, 365. This last list was all tested for six years.

Even boys and girls would not refuse a bit of candy when they are hungry and tired. They just look at you with that pleading expression which seems to say "Please let me out." course you may say they are naughty and they are a little home-sick, but it is a wonderful world to them. Even the nations have been always struggling for freedom. And for people, well you all have heard and read the many stories about slavery, when human beings were bought and sold with out possessing one item of freedom in any sense the term. Of course I admit there are many animals and people who are contented with their freedom, but they belong to the class who fail to serve the golden rule. If all obey that good old saying "what a better world this would be."

WEEKLY CHAT.

Dear Boys and Girls:—How many of you I wonder saw the little boy who was covered with ice during the past week? It was such a pretty sight where one could see just a few that I wonder how many of the kiddies would see how many forest like that and My! I saw you little folks who did, especially when the sun was shining on the ice. If the little twigs could speak I don't believe they would be pleased to have that coating of ice over them. Even though it did look so pretty, let us hope the trees will not suffer from the weight they have to carry for several days. When it snows to think of the many years it takes to grow a tree of some size, would seem cruel for the ice to cover them and make them unable to grow. Writing about forest a woods reminds me of the interesting letter I am publishing today in which one of our boys tells of seeing a rabbit. I had to smile to myself of the bunnies escaping and kidding you see their happy expression when they are out to get away from the forest. Of course it is hops of freedom. I never go through a forest where there are all sorts of birds and animals caged without feeling a wee bit sorry for the poor little creatures they just look at you with that pleading expression which seems to say "Please let me out." course you may say they are naughty and they are a little home-sick, but it is a wonderful world to them.
