

The DEERE MODEL B HARROW is a perfect implement for any service, and is peculiarly adapted for use on uneven or stony ground. Its flexibility enables it to conform to any surface and to cultivate it evenly. The gangs act independently and every movement is under perfect control. When either gang of a MODEL B passes over an obstruction, it rises while the other remains at work, as though nothing had happened. The gangs may be set at any angle or each at a different angle to suit conditions. There need be no skipping rough places in the "middle." Other special features of MODEL B are:—Easy double spring seat; high frame out of dust; adjustable disc scrapers, lightest possible draft

unusually substantial, but still possessing many of its distinctive features. Frame is made from a single piece of steel. Discs, crossbars and braces are all steel securely bolted together. Made in 6, 7 and 8-foot widths, it is one of the most efficient two-lever harrows at work to-day. Hard Maple oil-soaked bearings are used on this harrow. The Disc Blades are of the very finest steel, and the Double Angling levers make it one of the most successful machines for lapping lands or hillside work.

Genuine Bissell Disc Harrow

This IN-THROW HARROW with its strong backbone, extremely light draft and great capacity, enjoys a well-earned popularity in Western Canada. Its accurate balance guarantees uniform work. The discs stay down at their work—there can be no buckling, binding or "bumping" in the centre. Forty hard Anti-friction Balls used in the "Bissell" affords immense relief to the draft, while the horses are further considered in the fact that the Hitch is put well back and no weight lies on the necks.

Cyclone Wheel Disc Harrow

The CYCLONE MOUNTED DISC HARROW has many individual points that commend it to the serious consideration of farmers in search of a thoroughly satisfactory field worker that can be moved from point to point without injury to the disc-edges. It can be backed or turned anywhere. Each disc is independent, fitted with pressure spring as in a grain drill. You can't beat it—scarcely equal it for discing stubble, summer fallow or plowed land. It is also a great weeder or cultivator. Discs can be set to any depth.
