

# Children Cry for Fletcher's CASTORIA

Fletcher's Castoria is really a remedy for Infants and Children. Foods are especially prepared for babies. A baby's medicine is even more essential for baby. Remedies primarily prepared for grown-ups are not interchangeable. It was the need of a remedy for the common ailments of Infants and Children that brought Castoria before the public after years of research, and no claim has been made for it that its use for over 30 years has not proven.

## What is 'CASTORIA'?

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Sedating Syrups. It is pleasant. It contains neither Opium, Morphine nor other narcotic substance. Its age is its guarantee. For more than thirty years, it has been in constant use for the relief of Constipation, Flatulency, Wind Colic and Diarrhoea; alleviating Feverishness arising therefrom, and by softening the Stomach and Bowels, aids the assimilation of Food, giving healthy and natural sleep. ### SOMETHING ABOUT MILK

Mysteries and Marvels in Its Production and Life.

How Milk is Secreted—Thunder Does Not Sour Milk, But Bacteria Does the Business—Agalactia, or Absence of Milk, Occurs More Frequently With Cows Than in the Females of Other Live Stock.

(Contributed by Ontario Department of Agriculture, Toronto.)

**A** CONDITION known as "agalactia," or absence of milk in the mammae at the time of parturition, probably occurs more frequently in cows than in females of other classes of stock. It may occur in a female in any condition as regards general health, general care and surroundings. The causes, or conditions to which it is due, are not well understood. It occurs even though pregnancy has been apparently normal and has reached full term. It is probably more frequently seen in females which have not bred for a long time, or in those which have produced their first young, though themselves aged. While it may occur in an animal under any conditions, there are conditions that appear to predispose an animal to the trouble. In such cases there appears to be a want of development in the lacteal apparatus, which may have been caused by previous or present chronic disease of the udder, a chronic lessening in bulk, called "atrophy" of the udder, exhaustion following disease, severe labor, insufficient food, either during or immediately after pregnancy, natural debility, emaciation, etc.

The mammae is usually small and soft, and attempts to milk produce only a few drops of a yellowish fluid, in some cases followed by a few drops of a whitish, watery fluid. Treatment is frequently unsuccessful. It consists in feeding liberally on easily digested milk-producing food, massaging the udder frequently and stripping the teats three or four times daily. Great attention should be paid to the digestive organs in order to keep them as normal as possible, and the patient should be kept so that she will take considerable exercise. The writer's experience has been that the administration of drugs is non-effective.

In many cases the gland becomes perfectly inactive, and remains so until after the next parturition, when, in most cases, it becomes normal.—J. H. R. O. A. College, Guelph.
