

Never a corn on millions of feet nowadays

Do you know that millions of people who use Blue-jay keep entirely free from coins;

if a corn appears it is ended by a touch. A Blue-jay plaster or a drop of liquid Blue-jay is applied.

The corn pain stops. Soon the whole corn loosens and comes out.

Themethodisscientific. It is gentle, easy, sure. Old-time harsh treatments are supplanted by it with everyone who knows it.

It is made by a world-famed laboratory, which every physician respects. It is now applied to some 20 million corns a year. You can see that corn troubles are fast disappearing.

Then why pare corns and keep them? Why use methods which are out-of-date? Try this new-day method. See what it does to one corn. You will never forget its quick and gentle action. Your drug-

a fine new steel bark, his mind going and will always pay. back, no doubt, to the old days when he was the last to take in his rovals River into the fields. A mast was captain alone around the world. the sea to end her days in dreams of

There was nothing to suggest billowing royals in the aspect of the mast of the Spray, but to a sailor, especially if he has been ashore for years and is hungry for the sea, a mast is a mast, and makes promises. To a sailor a ship is a ship, and there is delight for him in patching and tinkering and messing about with wood and hemp and canvas, whether the ship be little or big. Capt. Slocum rebuilt the Spray, though she was more than ninety years old and had been given up for a ruin. Timber by timber and plank by plank he replaced the old with the new, until the old Spray, rising from the bones of her dead self, shaking off the idle years of dreaming, was fit for sea.

Those who passed by and paused to watch the progress of the work for Gibraltar, and hit it end on. asked if it would pay. Was the old Sailors can do such things. A month

He had no patent windlass, no bronze route led around the Cape of Good mouth, N.S., full and bye, around Spray spoke the Oregon on her way he had seen none, and then, being somewhat nervous at returning to a country at war, added, "Let us keep together for mutual protection." But in a few hours the Oregon was hull down ahead, a smudge of smoke over

the rim of the world. Off New York, the Spray ran into one of the worst gales of the voyage; she was swept from bow to stern with rushing green water, and was heeled down to her beam ends without a rag of canvas set. But she knew gales; she had come through the Straits of Magellan, and was not one to be caught just there, in the front yard of the United States. She ran along the coast of Long Island, and came into Newport harbor through the mine fields. A few days later, Capt. Slocum took her up the river and tied her to the stake which had been driven into the bank to hold her at her launching. She had been away

three years and two months. No one has asked, since then, if it paid to rebuild the Spray. Her voyage was an achievement. Never before had any ship done what she had done. Because of her voyage, and because of the excellence of the record of it which Capt. Slocum has left behind him in his books, the Spray has been the example and inspiration for all similar voyages which came after her.

ELKS VISIT BELL ISLAND .- A number of Elks left last evening for Bell Island to attend an initiation service of Bell Island Lodge No. 3. They will return to town this after-

(To be continued.)

Islands That Are Born.

There was recently another bad earthquake in the Alcutian Islands, which lie west of Alaska, and a new island was born. It was the third fisland to rise in

these waters within little more than a century. On May 1st, 1796, the Russian admiral, Bogoslof, was off this coast when a terrible darkness fell, and fire rushed out of the ocean with a mighty, roaring sound. Next day was seen a black island, three miles round and five hundred feet high, with the sea boiling all around it. Soon it began to decrease, and today there is only a little of it left. In 1883 there was another convul-

sion, and a new island rose close to the remains of the old one. A year later the first landing was made upon it by British officers. It was still very hot, and about eight hundred feet high. It soon began to shrink, and to-day is less than half its former

Fifty Feet Below Water. Expedition Island, off the north-

west corner of Australia, was thirteen miles long, and famous for its beauty. It was visited as lately as 1892. To-day it has disappeared, and is now fifty-feet below water.

In 1693, Torca, a large and beautiful island in the Indian Ocean, began to smoke. The centre sank in leaving a lake of raging fire, and the people took to their boats in terror. Presently the whole of Torsa had vanished, and to-day its remains lie hundreds of feet below the surface of the sea.

The most famous of disappearing islands is the fairy-island of St Brendan, which was said to lie to the south-west of Ireland, to be frequently seen, yet to vanish when any mariner sailed towards it.

That there was once such an is land is clearly proved by its mention in an old treaty in which the King of Portugal ceded certain islands white water thundering under the Castile. Among these islands is men-
