NUMBER 25

AGRICULTURAL.

How to make Agricultural Pursuits pleasant as well as Profitable. - For ages the employment of the husbandman has been look. ed upon as dull, uninteresting work. It has been thought to be a dull plodding occupa-tion of the hands and not of the head. And there has been too much foundation for such an impression. The agriculturists of years not long by-gone, did little with the head to slignify or enliven the work of the hands. A change for the better is now near at hand. Perhaps in your day farmers may be more intellectual, more intelligent, and more able to bring the truths of science to be sown quite early, else they will not ripen give them interest and delight in their occupations. But what others do; I hope you at least will take such measures as will conversely if not others, that agricultural employments are as interesting, intellectual, and pleasing pursuits as any with which they may be put in comparizon. I know of no method by which you can more effectually render them so, than by employing your mind upon your work. Most assuredly the mind and a cultivated taste than a neat gar. Moreover this is not the only way to make your pursuits pleasant, but it is the way to make them profitable al Your mental operations must be wrongsided and injudicious indeed if they do not lead you to the discovery of means whereby

LIME AS MANURE. - Much labour has been thod to enrich and prepare the ground so as to produce the best crop. After using various kinds of dressing, none have proved better than lime, for land on which corn is plan-

by delaying planting till the ground is warm, and dry, and the weather is generally warm, as cold weather and, severe storms, check, and in some cases destroy tender plants. Most of these crops succeed better if they be cores of potatoes yearly, and for the last two planted from the middle to the last of May, and it is generally best to get corn in by the 20th of May, as it requires the whole of a common season, to become well ripened. In cases of early planting the ground begrowing, whereas in cut seeds I have often and they produce as growing, whereas in cut seeds I have often and they may are the planting the ground begrowing, whereas in cut seeds I have often and they destination, as we have comes heavy and hard from severa storms, had a great loss from dry rot. When taking and the plants become stinted, while the up the general crop, I pick up my seed poby delaying planting till the ground is warm and the plants become stinted, while the up the general crop, I pick up my seed po-wgeds which are hardy, are "getting posses- tatoes of a uniform size, each weighing about ing villian, ere the exultation attended upon

sown as soon as the ground becomes dry enough to work; as in this case there is a much better chance for a good crop. Warm, muggy weather, is more likely to cause a failure in late sown grains, than that which is sown early. Last season the drought out off late sown oats and barley, and those nown late are generally more table to injure. sown late are generally more hable to injury from this cause.

Peas do best when planted early; and they are so hardy that cold will not injure them. When sown late they are liable to vessel have transpired since our last, which we are sorry to say negative all idea of innobenefit them in their manual labors, and to give them interest and delight in their occupations. But what others do; I hope you at

mind and a cultivated taste than a neat garden, and among our agricultural population where are few, who can lay claim to the title of a good farmer, who do not possess a good to good farmer, who do not possess a good to good farmer, who do not possess a good to good farmer, who do not possess a good to good farmer, who do not possess a good to good farmer, who do not possess a good farmer who do not possess a good farmer, who do not possess a good farmer, who do not possess a good farmer, who do not possess a good farmer who do not posses a good farmer wh

guarding it against mildew. No grain sown of all of the spring of all of the spring, in good order, one two, three, or even four good sound heads will grow on them; — there been destroyed.

The beet method of using lime is, to mix one eight part with old barn manure, then to be placed in the hole with the coru. When used for other kinds of grain, it should be spread on the top of the ground after it is ploughed, and harrowed in with the grain — No one can fully estimate the value of time how to the soil are easy.

In all was also the voluntary quality of densers are up to, but I do know that, if cab spring, in good order, one two, three, or even four good sound heads will grow on them; — derstand, that such is their assertion. Hearth having a noise on deck they left their hambour good sound heads will grow on them; — mocks, went up, and there beheld the demon assisted by two others, in the act of throwing the mate overboard, and this they soon suctions prove the means of their speedy approach to be placed in the following manner: The upper, narrow ceeded in doing. Having fully committed to take cognizance of crimes of mand approach the worst atrocity by this treather the worst atrocity by this treather the spring in good order, one two, three, or even mocks, went up, and there beheld the demon assisted by two others, in the act of throwing the mate overboard, and this they soon suctions prove the means of their speedy approach the following manner: The upper, narrow ceeded in doing. Having fully committed to take cognizance of crimes of manuer than the court of the sum of the prisoners are up to, but I do know that, if cab spirate the ship after having active the ship after having actively the spirate having actively the first having actively the first having actively the manner than the court of the sum of the story of the prisoners are up to, but I do know that a spirate having actively the spirate heads, leaving only as many of these as the for this purpose, nuless they try the experiment. The average difference in a crop is from one-third to one-half more by using the lime.

It is also almost the only sure preventative of vermin on fruit trees in this section of the country. Lime placed about the body of lar in autumn, cuts off the heads when retrees early in the spring, will prevent their quired for use and places the stumps next.

heads, leaving only as many of these as the whom they found asleep, but his dog, (so names of the prisoners are—Carr, Galloway. Johnston, Hazelton, Johnston, Haz

trees early in the spring, will prevent their quired for use and places the stumps p etty increase. Slacked lime mixed with soap & thick in the garden in spring. The labour water, used as a wash on the parts-of the tree water used as a wash on the parts-of the tree is trifling, the cut-worm gives no trouble, and where insects have deposited there eggs will destroy them entirely. This has been proved by the writer.

New mode of planting Analy Trans. mau overboard." This awoke Captain Mac-Kenzie, who rushed on deck, when the destroy them entirely. This has been proved by the writer.

In many parts of England, they estimate the value of their land, in some proportion to its nearness to lime kilms, on account of the value of their land, in some proportion, to its nearness to lime kilms, on account of the value properties of lime for dressing. Our far ners should turn their attention to the subject.

New mode of planting Apple Trees.—A horticulturist in Bohemia has a beautiful plantation of the best apple treees, which have plantation of the best apple treees, which have plantation of the best apple treees, which have plantation of the best shoots from the choicest sorts insert them in a potatoe, and plunge both into the ground, having put an inch or two of the shoot above the surface. The potatoe obtain as good crops without early planting.

Coin, potatoes, beets, carrots, parsnips, pumpkins, squashes, melons, cucumbers, beans, and most regetable crops, do hetter pumpkins, squashes, melons, cucumbers, beans, and most regetable crops, do hetter pumpking planting till the ground is warm. without being able to make any resistance as

sion of the land, and can be expelled only with much cost and trouble.

But some things require early attention.—

Spring wheat, rye, oats and barley should be odical.

I plant them in rows the success had subsided, by the very instruments through whom his unhallowed design-had been executed. The second traged, was as horrible in its incidents as the first. How to obtain a situation in the Excise.—
Take the liberty of distilling your own whister, without paying your proper duty to her nost gracious Majesty: persevere, and doubt to tout in good time you will find yourself a very pretty situation. cunning he had calculated upon 10 ensure his safety, led to his destruction. Dark hints of there being yet too many on board led each one to consider his own safety involved, and to suspect the designs of their tyrant. To prevent it is supposed any fatal results which might ensure from the quartel-some dispositions of such a gang of desperadoes and of which a specimen was afforded does and of which a specimen was afforded to the 'said Bankraj t. And I dehereby require.
