

Solar Townhouses

A demonstration project showing how five 1,250 sq. ft. townhouses would look. This is an early prototype of cluster housing designs produced for a CMHC study.

Harbourfront Renewable Energy Demonstration

The overall renewable energy demonstration project for Toronto's Harbourfront includes, (as well as the winter garden, not illustrated) solar-heated and cooled office building, an "Arctic" sunbath, a swimming pool heated by a skating rink operation, energy (from solar

and wind generation) stored in grain elevators, and an alternative energy demonstration. The two Harbourfront studies were supported by the Ministry for Urban Affairs, which also funds and operates Harbourfront.
