THE FARMER'S ADVOCATE

machine to buy. There's no use being frightened; we don't expect these motors to be perfect right off. Practice makes perfect and why not let them practice during this season and make what alterations are wanted during the winter and so have something better to show next year.

1228

This is a most interesting subject to us farmers and I think it would be well if others would give their views. There is a good opportunity now you have opened up the subject.

FARMER.

August Seeding of Alfalfa.

While spring is the usual season for the sowing of alfalfa in Canada, it is a matter of some importance to know that it has been seeded in August with excellent success, not only south, but north of the International Boundary, several Canadian farmers having informed us that they have obtained very satisfactory catches by working the ground to a fine tilth and sowing early in . that month. Some few state that they prefer August to spring seeding. This may be right. Orchardists, sowing alfalfa in July as a cover crop, to be plowed under the following spring have, in many cases, secured a splendid, vigorous growth, and it is not surprising that summer seeding should prove a success in the fields as to be fine tilth, plenty of moisture, conserved by before autumn. Farmers having land ready to be seeded to this valuable crop, are advised to try August seeding in an experimental way, and we shall be especially pleased to hear from those who may have given this method a trial.

The Irrigation Convention at Calgary.

which was held in Calgary on July 17th and 18th was irrigation enterprises in these two provinces will committee on arrangements, which met last May, of sending cattle and sheep to market half finished, nine bona fide delegates.

British Columbia was represented by a particularly good delegation, while Saskatchewan had a few delegates in attendance.

In opening the convention J. S. Wheeler, the secretary, read the official call, part of which is as follows:

Columbia, will open in the city of Calgary, Alberta, on the 17th day of July, 1907.

It is gradually dawning on the minds of thinking expenditure for labor. people that the most significant development in agriculture that Western Canada has yet witnessed is the movement to utilize the great mountain streams gated area of the whole of the United States, and the Mountains development is as yet in its infancy. Our mountain ranges contain natural reservoirs only awaiting the finishing touches of skill and labor to save water sufficient to irrigate vast areas, in addition to those that are now or can be provided for by our normal water supply. A propaganda so vast and fraught with such far-reaching interests, that enters so closely into the whole problem of Western Canada's colonization and future prosperity, is of deep concern to every resident of the Great West and imperatively demands the impetus, constructive guidance and conclusively proven in the Lethbridge district now, moulding influence that can only be effectively brought to bear through a strong, permanent organization. The National Irrigation Congress of the fruits of the more tender varieties." United States is accomplishing this purpose south of the line, and the time has doubtless come when a similar movement should be instituted in Canada. The whole question of irrigation in humid and sub-'aumid climates is now before the public in America. Experiments and investigations are being conducted at many agricultural colleges and public experimental stations, with a view to demonstrating that agricultural operations can be carried on as successfully under artificial watering in humid climates as in drv climates. While the result of withholding water in the latter is a total failure, the effect of using water under humid conditions, one year with the other. spells success. After the reading of the official call, His Honor Lieut.-Governor Forget of Saskatchewan was introduced for the purpose of officially opening the convention, which he did with a short, interesting address. There then followed speeches of welcome and responses to the same by prominent personages present.

The second paper was read by C. W. Peterson, his subject, "The Industrial Development Follow-ing in the Wake of Irrigation." Among other things Mr. Peterson said:

"In discussing the industrial development as a result of irrigation, it is well to bear in mind that the forecasting results as is demanded in all other lines of bulk of industrial investment invariably locates production. Irrigation makes this a practical possitributary to the consuming population, other things being equal. This means that density of population, which creates favorable market conditions, attracts industrial enterprises manufacturing products required by such a population. This refers of course, articles required upon the farm under intensive culture

settlement and furthermore, a prosperous and thrifty gallon thereof as speedily as possible. population. Such being the case, the industrial material the products of the soil.

Some interesting figures taken from the U.S. census were given by Mr. Peterson. He showed that census were given by Mr. Peterson. He showed that Experiments in the Use and Duty of Water on the of the total irrigated area in the U. S. 64% was Irrigated Farm," was read by W. H. Fairfield, planted in hay and forage crops, 24% in cereals, Superintendent of Dominion Experimental Farm, leaving but a small per cent. for fruit and vegetables:

"The popular belief that irrigation is not a practical proposition in latitudes where fruit cannot be grown and where a ready market of large proportions does not exist for the side issues of the irrigated farm is, well. The three essential conditions would appear therefore, evidently a fallacy. In the state of Colorado, with an irrigated area of 1,500,000 acres, only Columbia Irrigation Project." previous frequent surface cultivation, and time 35,000 acres are devoted to fruit growing, while over enough to allow the alfalfa to get a good top a million acres produce hay and forage, principally alfalfa. This is conclusive proof that live stock Agricultural College. Prof. Carpenter is considered feeding and finishing holds its own successfully to be one of the best authorities on irrigation quesagainst fruit growing in a state where the latter can be prosecuted with the greatest facility and profit.

"Owing to the fact that the provinces of Saskatchewan and Alberta will probably never lend themselves to fruit growing on a large scale, while conditions are almost perfect for live stock husbandry, The first Western Canada Irrigation Convention it is reasonable to suppose that the extension of a decided success, much more of a success than the simply revolutionize the live stock business. Instead had dared to hope for. There were present ninety- they will be grain fed before marketed. This will also insure the marketing of our live stock during Although Alberta was numerically strongest, still every month of the year instead of, as at present, confining it to two or three months in the autumn. Immense numbers of hogs will also be raised and fattened and the Western prairie section will become an enormous ham and bacon exporting instead of importing country.

"Even the province of British Columbia with its those dealing with the following subjects: "The first Irrigation Convention covering the excellent local market for agricultural products will provinces of Saskatchewan, Alberta and British probably find it more profitable to grow stock feed on a large area of its valuable irrigated lands than to devote them entirely to other crops commanding a higher money value per acre but requiring a larger the use of Water on the Irrigated Farm.

FRUIT GROWING.

There can be no doubt that the introduction of in aiding the farmer largely to eliminate the element irrigation in the valleys throughout British Columbia of uncertainty from his operations. Irrigation will wonderfully stimulate fruit production there. enterprises, private and corporate, now completed That province will always have a ready market in and actually under way in Western Canada, com- the prairie section, as it is improbable that the more prise an area equal to one-quarter of the total irri- tender fruit will ever be produced east of the Rocky

FOUNDED 1800

In concluding, Mr. Peterson said:

"The 'dark ages' when irrigation was regarded purely and simply as a means to reclaim desert areas, have long ago passed into oblivion. The new agriculture demands the same degree of certainty in bility. The arch enemy of the farmer in every portion of the civilized globe is drouth. What would become of the gardens, lawns and trees of our cities in the East, as well as in the West, without an arti-ficial water supply? What is good for the lawn is particularly, to the hundred and one manufactured equally good for the farm. Irrigation farming is advanced agriculture. It is more. Irrigation farming is business farming and those sections in our Great West that are favored with an abundant water Irrigation means small holdings and a dense rural supply available for irrigation ought to utilize every

Wm. Pearce, Chief Surveyor C. P. R. Irrigation development of any irrigation section is by no means Department of Calgary, read a well written paper confined to branches of industry requiring for raw entitled "The Social Phase of the Irrigation Movement.

> A paper entitled "Agricultural and Horticural Lethbridge.

> J. S. Dennis of the C. P. R. was unable to be present, but sent a paper on "The Statutes of Irrigation in Canada," to be read.

A. E. Ashcroft, C. E., of Vernon, British Columbia, read a paper entitled "Some Problems of a British

The most interesting speaker on the entire program was Prof. L. G. Carpenter, of the Colorado tions in the U.S. and in his two addresses at the convention, he impressed his hearers that he was thoroughly familiar with the many sided subject of the artificial use of water on growing crops, not only from the farmer's standpoint, but from the lawmaker's, the administrator's, the engineer's, as well as the social and industrial side.

One statement made by the Professor which was particularly worthy of note and one which doubtless few of the readers of the FARMER'S ADVOCATE are aware of, is that the foodstuffs of seven eights of the inhabitants of the world are raised by irrigation. In fact it is, as Prof. Carpenter admitted, a statement which it is hard for the people of the American continent to accept, but one which the Professor assured his hearers was the truth.

RESOLUTIONS.

Some of the important resolutions passed were

Forestry as Affecting Irrigation.

Extension of Surveys in Connection with Irrigation. Agricultural and Horticultural Experiments and The Duty of Water.

Laws Relating to the use of Water and the Administration Thereof in British Columbia.

Laws Relating to the use of Water and the Administration Thereof in Alberta and Saskatchewan.

Permanent Organization.

Location of Agricultural College for Alberta.
