a verdict to-night that he came to his death by being hit upon the head by some blunt instrument in the hands of a unknown person. It is generally believed here that he committed suicide, notwithstanding the verdict of the jury. A letter was left by him to the public to the effect that he was going to make away with himself, and was found in his room at Detroit to-

Missionary Troubles at Tarsus Washington, Aug. 17.—Acting Secretary of the Navy McAdoo recieved a cable this morning from Admiral Kirkland, commanding the European squadron, announcing that the cruiser Marblehead had sailed from Gravesend for Gibraltar on her way to Syria. It is probable that the Marblehead will make only a short stay at Gibraltar, whence she will proceed to Syria, where her commander will be expected to co-operate with Minister Terrill in the investigation of the outrages on the American missions at Tarsus and Marso van. The Marblehead will afford a place of refuge also for such of the Americans as desire a place of safety. nanding the European squadron,

A new woman's club in Baltimore has amed itself "Quadridga." This is the atin'name for a four horse charlot, and no suggestion of handling the reins is ob-Capt. Samuel Chester Reid, the Ameri-

A horseless carriage propelled by electrity is one of the latest novelties enjoyed to the hought'ni inhabitants of Boston. In new carriage is not a toy, but a vehicle reighing 5,100 pounds and carrying six

weighing 5,100 pounds and carrying ma-or seven passengors.

Like some other Boston inventions, says the New York Times, it is English in ap-pearance with American works inside. It resembles an English brake with a deep well underneath the floor, in which the storage batteries and motor are placed. The batteries coulsit of forty-four chloride cell, arranged in four groups, of eleven sach.

The motor has nominal strength of four orse power, and turns the hind wheels by nears of an intermediate shaft and chain earing. In order to allow the vehicle to

From this time on the parents, the children, the dogs and the cats of the respective families are on the warpath, ready to annihilate one another, and even the pet parrots call each other names until—until the election is over, and white-winged Peace comes limping back with a bandage over her left eye. Then they all wish they hadn't been so intense and impulsive. They made matters more serious than

they need to have done. No matter how

they need to have done. No matter hew
the election terminates the world goes on
with no perceptible wobble and the government at Washington still lives.
Since we cannot get along without polities, a devotion of though? to the study of
how best to get along with it is eminently
proper. Let us not go into the next campaign with the distressing thought in our
minds that about one-half of the voters of
the nation are bent upon sending this
government to the everlasting dogs. As
a matter of course, the demagogues will
howl and the radical partisan press will
whoop 'er up. That's their business. It
is bread and butter to them. But the
good, common people should take things

coolly.

The voter who stays quietly at home with his family is a safer citizen than the one who is out every night wearing out his shoes in a political parade. Let's becalm regarding politics.—Good Roads for late.

A Big Bird, splendid black cagle, measuring six nine inches from tip to tip of its 78, wa. killed near Hodgeville, Ky., a days ago.

PORTABLE MAXIM GUNS-New Weapon for Infantry Use The Shoots Six Hundred Bullets a Minute.

Hiram S. Maxim has invented a machine gun that can be carried around by a soldier, set up somewhat as is a photographic camera and fired 600 times a minute. The muzzle can be moved like a garden hoss and made to direct a stream of lead upon any point. It is claimed that the stand makes it much more accurate than any gun held to the shoulder,

It has exactly the same principle as the Maxim quick-firing guns used for naval and artillery purposes, but it is a smaller edition, making the gun practicable for infantry use. Its calibre is 500. It has a range of 8,200 yards and sends a bullet at a velocity of 1,850 feet a second. A bullet from it will go through forty inches of oak.

changing barrels in action. The time be-tween the last shot with the old barrel and the first with the new was im. and the first with the new was im.
13 2-5a.

Then there were experiments with the extraction of defective cartridges and with the firing of blank cartridges.

In the Maxim gun the recoil is utilized as power to load the gun automatically and work the haumer. When blank cartridges are used the recoil is not sufficient for this purpose, and a cap is affixed to the muzzle and the gun converted into an air-pump, the confined gases in which work the mechanism.

WHAT A FROG'S GROAK DID. WHAT A FROG'S CROAK DID.

READY FOR USE.

work the mechanism.

WHAT A FROG'S GROAK DID.

A Peculiar Incident That Led to the Invention of the Telephone.

It is not common knowledge, except to those familiar with electrical and telephone history that the first belephone was constructed in Racine, Wis, and that the inventor, Dr. S. D. Cushman, is now a resident of Chicago.

His litigation with the Bell Telephone Co., extending over a period of ten years and costing \$100,000, has been reported from a legal standpoint, but as it is one of Mr. Cushman's principles that personal reminiscences are in bad taste, he has seldom given a formal interview. His offices are in the Stock Exchange building. Here the venerable inventor, 77 years of age, who built the first telegraph. lines in his part of the "far West" pursues his business with more alertness to affairs than the average young man.

In the corner of the room is a large, won price of muslin on which is painted in thin color a representation of a telegraph line strotching away in the distance, connected with a crude instrument, set on two logs near which a frog is sitting by a stream. This old relic represents the telegraph ine of "good cedar poste" which Dr., Cushman constructed west from Racine for the Eric & Michigan telegraph company in 1851, and the experimental lightning arrester which led to his discovery.

It is a reminder of the days when Dr.

ry. It is a reminder of the days when Dr. It is a reminder of the days when Dr. Cushman was associated with Prof. Mories in the pioneer days of telegraphy. On his deak is the first to be phone transmitter, constructed in 1881, twenty-five years before the Bell patents were taken out. It is a small square box with a speaking orifice and co taining mechanism on the same principle as that of the modern transmitter.

principle as that of the modern transmitter.

In 1861 Dr. Cushman undertook the construction of a lightning arrester, his object being to take the lightning that struck
the wire and run it into the ground,
the instrument being so constructed that it
would not interfere with the light current
used in telegraphing. This instrument
was placed out on the prairie on two logs
sand in order to know when it had operated a triple magnet with a sheet of thin
iron as the poles, similar in construction
to a modern "receiver," was placed in the
corner of the box. In case the lightning
passed through the instrument the electromagnet would pull this strip of iron down
into the range of a permanent magnet,
which would retain it until the instra-

identified with the discovery of the telephone.

Dr. Oushman is the inventor of the firealarm system in Chicago. His patent
office reports, he says, "would weigh aton" and contain a great number of his
electrical patents. To the priority of Dr.
Cushman there is said to be no doubt, and
the contest of the validity of the Bell
patents begun in 1885 was at last taken to
the Unit d States District Court of Reston in 1893, where it is new pending.

Dr. Cushman is a descendant of the historical Cushmans who came to Virginia in
1840. He was a friend of Horace Greeley
and most of his prominent contemporaries
in what might be called the sra of rapid
mechanical development, in ealry life he
was a newspaper reporter. Some twenty
years of his life was spent in central Ohio,
and he says: "I never doubted that God
made that country."

What did your mother get for Christ-

made that country."
What did your mother get for Christmas?" asked Tom of Will,
"Money," said Tom. She said this year she'd rather have money than anything else."
"Pooh! Mine wouldn't, said Will," and so papa gave her a solid gold ap set with diamonds.

SEASIDE SOCIETY NOTE. nent between Miss Plumper and hich we aunounced last winter tand, been broken off by request

As small Demand.

As the light gun is used by the infantry, it is important to ascertain how quickly it can be taken from the packing case and put into action. Expert Huber, of the Maxim-Nordenfelt Gun Company, handied the gun recently before a board of officers at the Government proving ground at Sandy Hook. He first hung it over his shoulder in marching order. At a word he

stock, while the housewife is saved annoyance.

In the early days of the commercial history of eggs farmers employed primitive methods for the preservation of eggs in store for the winter months, when the supply is almost cut off and the market price abnormally high. In January the price often used to run as high as 50 and 60 cents a dozen, while in the spring and carry summer the supply was a drug and dear at from 4 to 8 cents. The eggs were packed in oats or sawdust and also in preserving fluids. This process was far from satisfactory. The preserving fluids had a tendency to weaken the shells. A process came into use by which the eggs were dried by striffcial heat and ground up into the shape of meal for packing. Such egg meal found favor with baker, and was practicable for use on ocean vessels.

and was practicable for use on ocean vessels.

The cold storage system of preservation was hit upon as the most successful, and it has assumed vast proportions, millions of dollars being expended in plants. Chicago has several of the largest concerns of the kind in the country. The old method of using in the country loc is being gradually dispensed with in view of the improved facilities of the big storage houses. Chicago has sufficient capacity to hold 280,000,000 eggs at one time. Notwithstanding alleged discoveries by which eggs can be manufactured no process has been found successful up to date. No egg has ever been manufactured except at a greater cost than the production of the natural one.

Truth About Canada. Truth About Canada.

There is not a community in the world of \$,000,000 in numbers more free fron objectionable elements than that of Can ada. Canadians are well versed in the ar of self-government. They clearly under stand that true liberty is not license therefore they have profound respect fo law and constitutional means and methods. They demand honest money. They have adopted gold as a single standard of exchange or measure of values. There is oas. Into demand nonest money. Into have adopted gold as a single standard of exchange or measure of values. There is not any demand in Canada for rag money, or a debased silver ourrency. Although an ultra-loyal people they believe in protection to Canadian industries in preference to those of Mother England. They have as many miles of railway per capits as we have, and they have common sense enough not to emberraes their railway system's with adverse legislation. The history of their banking system is most creditable to their ski 1 in finance.

The chaplain of a Southern prisononce stated that one of the distressing experiences of his prison life was with a murderer sentenced to death. The man remained stolid and urmoved by any appe 1

derer sentenced to death. The measure mained stolld and unmoved by any appe I to his moral sentiment or to his conscience. As the chaplain bade him farowell at his execution, he said:

"I'll tell you why you couldn't do nothin' for me. Other men's mothers taught them religion when they were little. My mother was a drunken thief!"

God puts a child's mind, like a white scroll, into the mothers' hand. He alone fully knows what she writes there.

UNFILIAL ACTION.

UNFILIAL ACTION. woodstook, Ont. Aug. 17.—Mr. Thomas right, a farmer, who has until recently resided on the 'thi concession of the township of South Norwich, was in town to day consulting Crown Attorney Ball with reterence to the treatment he has sustained at the hands of his son, Albert Wright. The old gentleman is more, than 30 wears. at the hands of his son, albert wright. The old gentleman is more than 80 years of age, and rather eccentric. He has a local reputation as an inventor, and has secured several patents, among others a machine for manufacturing wheel hubs, which is now being successfully operated. For some time past he has been living with his son, Albert Wright, on the homestead, and

some time past he has been living with his son, Albert Wright, on the homestead, and a short time ago conveyed his farm to his son, reserving a life interest. Subsequently his son demanded a release of the life interest which the old man indignantly refused to give.

About three weeks ago Albert Wright had the old man examined by Drs. Culver, of Otterville, and Haight, of New Durham, who pronounced him insane, and gave an order for his removal to the asylum at London. He was immediately removed, and after his arrival there he was examined by the medical men of the asylum, with the result that they found him perfectly sane, and ordered his friends to remove him. Newton Wright, another son, residing in town, brought the o d gentleman here yesterday. Mr. Wright has received a letter from Dr. Culver expressing his regn t, and saying that he was mistaken as to his insanity. He now proposes to issue a writ aganst the two doctors and his son Albert for damages for having him confined in the asylum, and to eject his son from the farm and cancel the conveyance. The affair is causing cansiderable excitement throughout the county.

The estimate is now that the wheat crop of the United States in 1895 will not be as large as that of 1894, but that the production of rice and barley will this year be greater than it was lost year. Years ago a queer o'd fellow in Powder-y, Texas, borrowed an iron kettle of a leighbor. Soon after he died in his nouse. There were many searches for the cettle, which was at last found, with \$3,000 to the left of the cettle.

One of the uses of electricity, a fast making itself feit in the prog the arts, is its power to reduce meta-their salts, notably in the case of a ium, which will soon be turned
