

a year since she stopped taking it, and she has been free from her headaches since.

The second case was a typical hemicrania in a man 28 years of age, with a markedly *neurotic* family history. He has been troubled for 10 years, and during the last year the attacks recur about once a week, and are ushered in by giddiness and dimness of vision. He commenced taking the hemp in September, 1877, in half-grain doses three times a day, and continued it for a period of six months. He had only two attacks afterwards. It is now 18 months since he discontinued using the hemp, and during this time he has had no recurrence of his headaches.

The third case cured was in a married lady, aged 26, who was subject to unilateral periodic headaches for 10 years, recurring about every two weeks. She commenced with a grain of the hemp daily, and took it continuously in those doses for six months. She had only one attack after commencing treatment. Up to the present she has been free from her headaches for two years.

In the three cases just narrated, the patients have all been free from headache for a period of nearly two years in each case, and can therefore be called *cured*. In the first case, that of a lady 48 years of age, it might be considered that as hemicrania often disappears spontaneously at the menopause, the Indian hemp had very little to do with the cure; but she was free from her hemicrania some six months before the cessation of the catamenia.

In the six cases where great benefit was derived from the hemp in mitigating the severity and lengthening the intervals between the attacks, the drug in two of these cases has not as yet been taken for a sufficient length of time to decide whether these cases will be placed among the list of cures or those simply relieved. One of these cases is as follows:—

Mr. B., aged 54, says he has been subject to sick headache for four years. The pain starts suddenly in the region of the left supra-orbital foramen and extends upwards over the left parietal bone, and is attended by a subjective feeling of coldness and an objective feeling of heat. Palpitation of the heart sets
