CRACKING OF STRATA 15 MILES BELOW SURFACE BROUGHT ON YESTERDAY'S SHOCK

BOSTON, Jan. 8.—The probable cause of the earthquake which rocked eastern Massachusetts and New Hampshire, yesterday, shook houses, office buildings and broke windows in many towns throughout that section, was attributed last night by Reginald A. Daly, Professor of Geology at Harvard University to the cracking of a great strata of rock about fifteen miles below the surface of the earth and some tens of miles to the north of this city, which for millions of years has been bearing the burden of the billions of tons of earth and rock above it.

CAUSED 'QUAKE
