MODERN LUMBER DRIERS

The dry kiln of to-day is born of the desire of manufacturers of lumber to make a short cut from the tree to the consumer. Much thought has been devoted to the subject of drying lumber quickly; many theories have been advanced, and some degree of success, in many instances, attained. In one instance only, however, has absolute, unqualified correctness of theory been demonstrated in actual, every-day practice. Success has crowned our efforts, and

The Standard Improved Compression Dry Kiln

Stands alone to-day, the embodiment of the only correct principle of drying green lumber artificially. It is the only kiln which will dry every board from the top course to the bottom, and from the sides to the centre of the pile, quickly, thoroughly and evenly, leaving them bright, straight and stainless—perfect lumber.

This is the only kiln in which heavy, cast-iron headers, and "made-to-order" pipes and fittings are used. They cost more than the common kind, and are worth more, but are none too good for the "Standard," in which every inch of material and every detail of construction is of the most exacting quality.

Moist Heat, absolutely controlled in every part of the drying room, is the drying agent employed in this kiln.

Elaborate, illustrated Catalog for the asking.
